Removing Microformats from bbc.co.uk/programmes

Michael Smethurst | 23 Jun 08

Since [/programmes](#) first [went live](#) we've had a lot of feedback. The data was accessible to people and it was a pain at the application design stage. Similar to HTML pages as a lightweight API. We used a microformat to add start times, end

Unfortunately there have been a [number of concerns](#) over hCalendar's use of the [abbreviation design pattern](#). This uses the HTML abbreviation element to add machine data to pages. Our concerns were:

- the effect on blind users using screen readers with abbreviation expansion turned on where abbreviations designed for machines would be read out
- the effect on partially sighted users using screen readers where tool tips of abbreviations designed for machines would be read out
- the effect of incomprehensible tooltips on users with cognitive disabilities
- the potential fencing off of abbreviations to domains that need them (travel - [airport codes](#), finance - [ticker symbols](#) etc)

Until these issues are resolved the [BBC semantic markup standards](#) have been updated to prevent the use of non-human-readable text in abbreviations. As I type the revised standard has not been published—I'll update this post with a link when that happens. Updated standard is [here](#). For this reason we've taken the

About This Entry

PROGRESSIVELY
ENHANCED HTML5
(**INFUSED** WITH SHIM)

“An indispensable tool.”

— Bruce Bowman, *Adobe BrowserLab Product Manager*

Modernizr is an open-source JavaScript library that helps you build the next generation of HTML5 and CSS3-powered websites.

Why use Modernizr?

Taking advantage of the new capabilities of HTML5 and CSS3 can mean sacrificing control over the experience in older browsers. Modernizr 2 is your starting point for making the best websites and applications that work exactly right no matter what browser or device your visitors use.

Thanks to the new Media Query tests and built-in [YepNope.js](#) micro-library as `Modernizr.load()`, you can now combine feature detection with media queries and conditional resource loading. That gives you the power and flexibility to optimize for every circumstance.

Check out the [full list of features](#) that Modernizr detects, or learn more about [conditional resource loading with Modernizr](#).

Download Modernizr 2

Use the commented, uncompressed Development version to develop with and learn from.

[View documentation](#)

Then, dive into the Production build tool and pick just the tests you need!

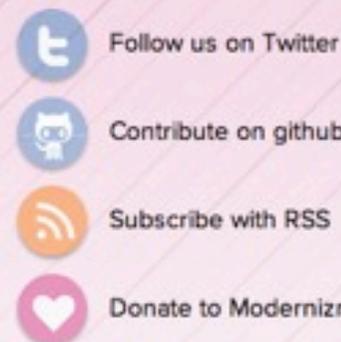

Get started with Modernizr

While Modernizr gives you finer control over the experience through JavaScript-driven feature detection, it is important to continue to use best practices throughout your development process. Use progressive enhancement wherever you can, and don't sacrifice accessibility for convenience or performance.

```

DEMO

HTML5 VIDEO

- WIDTH and HEIGHT should be required, IMO, but movie plays anyway based on the values in the video file itself.
- Video formats may have their own posterframe. The browser should use that by default unless overridden by valid POSTER attribute value.
- Text can be included within VIDEO element to allow user to download video if their browser doesn't support.
- If you want to give users control, use CONTROL attribute.

HTML5 VIDEO

- Video can start automatically if using the `AUTOPLAY="1"` attribute and value.
- Spec provides for `LOOP`, `AUTOBUFFER` which also take a value of `0` or `1`.
- Codecs support...

HTML5 VIDEO

“It would be helpful for interoperability if all browsers could support the same codecs. However, there are no known codecs that satisfy all the current players: we need a codec that is known to not require per-unit or per-distributor licensing, that is compatible with the open source development model, that is of sufficient quality as to be usable, and that is not an additional submarine patent risk for large companies. This is an ongoing issue and this section will be updated once more information is available.”

- <http://www.whatwg.org/specs/web-apps/current-work/#video-and-audio-codecs-for-video-elements>

CODECS

- Ogg (or “Vorbis”)
 - No need to worry about patents
- H.264
 - Created by the MPEG group
 - If you have blu-ray disc player, you are using it
- WebM
 - A wrapper for the VP8 video and Ogg audio streams

VIDEO CODEC SUPPORT

	FF3.6+	S	Ch5+	Op10.6+	IE9
Ogg	Y		Y	Y	
H.264		Y	Y*		Y
WebM	(W4.02+)		(Ch6+)	Y	

Select new file Save Ogg

[Subscriptions](#) [History](#)

YouTube HTML5 Video Player

This is an opt-in experiment for HTML5 support on YouTube. If you are using a supported browser, you can choose to use the HTML5 player instead of the Flash player for most videos. Your comments will help us improve and perfect the mixtures we're working on. So jump in, play around, and send your [feedback](#) directly to the brains behind the scenes.

Supported Browsers

Right now we support browsers that support both the video tag in HTML5 and the h.264 video codec. These include:

- Google Chrome
- Apple Safari (version 4+)
- Microsoft Internet Explorer with Google Chrome Frame installed ([Get Google Chrome Frame](#))

Updates!

- 1/27/2010: Fullscreen support enabled (if supported by browser).

Additional Restrictions (we are working on these!)

- Videos with ads are not supported (they will play in the Flash player)
- Fullscreen is not supported
- If you've opted in to other testtube experiments, you may not get the HTML5 player (Feather is supported, though)

You are not currently in the HTML5 beta.

Captioned Media: Literacy Support for Diverse Learners

By: National Center for Technology Innovation and Center for Implementing Technology in Education (2010)

In a typical classroom, a teacher may find many students who are struggling readers, whether they are beginning readers, students with language-based learning disabilities, or students who are English language learners (ELLs). One motivating

available on television programming, live newscasts, movies, and sporting events.² Additionally, web-based applications have made it increasingly easy for producers to caption online video, opening up more options for accessible media.

The increased availability of captioned media, whether on educational videos, popular movies, or live television broadcasts, allows teachers to begin incorporating more accessible media easily into their classrooms. As more teachers began using captions in their classroom, many found that captions could help support a wide variety of learners, beyond their deaf or hard of hearing students.

The use of captioned or subtitled media can be a great tool for teachers looking to differentiate classroom instruction.

Presenting information in multiple ways and using motivating media can help address the diverse needs of learners in the

Captions for Video with Flash CS3

In: [Articles](#)By [Tom Green](#)

Published on June 4, 2007

Got something to say?

[Share your comments](#) on this topic with other web professionals

The hype that has sprung up around the release of Adobe's CS3 Studio products has virtually ignored the one feature that many people would instantly consider a critical reason for buying the Studio or the upgrade.

If you were to believe Adobe, this is the greatest software release of all time. Meanwhile, many consumers are excited about the new features in Dreamweaver CS3, Illustrator CS3, Photoshop CS3, Flash CS3, and Fireworks CS3. Having been involved in the testing process for the apps, I can be forgiven for my indifference to the chatter. When you use it, play with it, and crash it day in and day out, you become a bit jaded. At least I was until I dug into Flash for a book I was writing and discovered a feature that no one was talking about. (Don't believe me? As of this writing, it has yet to be mentioned by Adobe and was totally overlooked during the unveiling in March.) The feature: the captioning component in Flash Professional CS3

The really great thing about this feature, from our perspective as designers and developers, is how simple it is to accomplish and manage. If the timing is out or a caption is wrong, you simply change a few words or numbers in the XML file.

A jQuery plugin that makes it easy to work with captions for HTML5 video. — [Read more](#)

Read-Only

HTTP Read-Only

git://github.com/johnmcc/jCaps.git

This URL has Read-Only access

Added callback function to be called when caption changes. Fixed scope of currentText so that new caption is only appended when it changes (bugfix)

0:00:00.470,0:00:02.070

welcome to the US led senate

0:00:02.070,0:00:06.760

a day of practical advice on creating great
user experienced of the way

0:00:06.760,0:00:08.849

your house today are Christopher schmidt

0:00:08.849,0:00:13.519

a veteran with designer who me my view is
the author of the CSS cookbook third edition

0:00:13.519,0:00:18.859

as partner in crime our styles who previously
helped organize stop by southwest

0:00:18.859,0:00:24.570

in fact it was at southwest southwest that
the dynamic duo first got the idea to organize

0:00:24.570,0:00:29.310

conferences that help people make better web
site they're more hospitable to humans

0:00:29.310,0:00:32.470

and those barren environments for humans

0:00:32.470,0:00:35.819

starting with this is his last summit in July
two thousand nine

0:00:35.819,0:00:41.550

they quickly expanded to cover topics ranging
from can go to a team of five and more

0:00:41.550,0:00:45.100

and I was delighted to learn that they were
inspired by head

SRT FILES

- SRT files are text files used in video playback; therefore, they do not contain any video data.
- Text file containing subtitles used by various video playback programs; supported by DivX, DVD, and other video formats;
 - Includes the time each subtitle should be displayed followed by the text of the subtitles.
 - Subtitle files are often named according to the language of the subtitles, i.e. "movienam**-eng.srt**" for English and "movienam**-ger.srt**" for German subtitles.

TRANSCRIPT-EN.SRT

1

00:00:00,000 --> 00:00:06,000

Allow me to introduce myself My name is Tay It's T-A-Y,T-A-Y to the Z

2

00:00:06,000 --> 00:00:09,000

This is the web and it's gonna murder your TV It was Chocolate Rain

3

00:00:09,500 --> 00:00:11,500

Wrote a song about that history Chocolate Rain

4

00:00:12,000 --> 00:00:15,000

Now I'm paid a hefty hefty fee Chocolate Rain

README

HTML5 GeoLocation jQuery Plugin
<http://github.com/teleject/HTML5-GeoLocation-jQuery-Plugin>

<http://github.com/teleject/HTML5-GeoLocation-jQuery-Plugin>

- To get plugin to work on YOUR own site, you will need to get a Google Maps API registered to your domain:
<http://code.google.com/apis/maps/signup.html>
 - Use Microformats' hCard for addresses

```
<div class="vcard">
  <a class="url fn n" href="http://www.theqcard.com/">
    <span class="given-name">Jane</span>
    <span class="additional-name"></span>
    <span class="family-name">Smith</span>
  </a>
  <div class="org">Old School BBQ and Grill</div>

  <div class="adr">
    <div class="street-address">2907 E MLK Jr Blvd.</div>
    <span class="locality">Austin</span>,
    <span class="region">TX</span>,
    <span class="postal-code">78702</span>
    <span class="country-name">USA</span>
  </div>
  <div class="tel">512-974-6830</div>
  <div class="note distance">
  </div> http://microformats.org/code/hcard/creator
</div>
```

```
<div id="locations2">
```

```
<ol>
```

```
<li><!-- Microformats address 1 --></li>
```

```
<li><!-- Microformats address 2 --></li>
```

```
<li><!-- Microformats address 3 --></li>
```

```
<li><!-- Microformats address 4 --></li>
```

```
...
```

```
</ol>
```

```
</div>
```

```
<script type="text/javascript" src="http://  
ajax.googleapis.com/ajax/libs/jquery/1.4.2/

Static Maps API

Sign Up for the Google Maps API

The Google Maps API lets you embed Google Maps in your own web pages. A single Maps API key is valid for a single "directory" or domain. See this [FAQ](#) for more information. You must have a [Google Account](#) to get a Maps API key, and your API key will be connected to your Google Account.

Here are some highlights from the terms for those of you who aren't lawyers:

- **There is no limit on the number of page views you may generate per day using the Maps API.** See this [FAQ](#) for more information.
- **There is a limit on the number of geocode requests per day.** See this [FAQ](#) for more information.
- **The Maps API does not include advertising.** If we ever decide to change this policy, we will give you at least 90 days notice via the [announcements lists](#).
- If you use other APIs in conjunction with the Maps API, you should also review the terms for the other APIs. Note in particular that the [GoogleBar](#) in the JS Maps API uses the AJAX Search API, and that API has its own terms.
- **Your service must be [freely accessible](#) to end users.** To use Google mapping technology in other types of applications, please use [Google Maps API Premier](#). See this [FAQ](#) for more information.
- **You may not alter or obscure the logos or attribution on the map.**
- You must [indicate whether your application is using a sensor](#) (such as a GPS locator) to determine the user's location.
- You may use the API (except for the Static Maps API) in websites or in software applications. For websites, please sign up with the URL where your implementation can be found. For other software applications, please sign up with the URL of the page where your application can be downloaded.
- Google will upgrade the APIs periodically. To be notified of updates, please subscribe to the [announcements lists](#).
- Remember that we reserve the right to suspend or terminate your use of the service at any time, so please read through the [FAQ](#) and [forum posts](#) to decide whether your site meets the Terms of Use before you begin API integration.

Last updated: November 26, 2008

1. Your relationship with Google.

1.1 [Use of the Service is Subject to these Terms](#). Your use of any of the Google Maps/Google Earth APIs (referred to in this document as the "**Maps API(s)**" or the "**Service**") is subject to the terms of a legal agreement between you and Google Inc., whose principal place of business is at 1600 Amphitheatre Parkway, Mountain View, California 94043, United States ("**Google**"). This legal agreement is referred to as the "**Terms**".

```
<script type="text/javascript" src="http://ajax.googleapis.com/ajax/libs/jquery/1.4.2/jquery.min.js"></script>
<script type="text/javascript" src="js/jquery-location.1.0.0.js"></script>
<script type="text/javascript">
  $(document).ready(function()
  {
    $('#locations2').location({
      'apiKey' : 'YOUR_API_KEY_HERE'
    });
  });
</script>
```

Treat your dog to a special day!!!

At Pampered Pups we service your dog from head to tail. Our stylists have decades of experience grooming dogs and are up to date on the latest styles for all breeds. At Pampered Pups your dog is never stuck in a kennel. Our special guests are pampered in a relaxed, supervised atmosphere. Be ensured your pet will get the greatest of attention!

All the products used at Pampered Pups are natural, and never tested on animals. If your pet stays for the day, we offer them a healthy meal with our all natural dog food, that we also offer for sale. Keep your pet looking sharp! Choose from our large selection of pet fashions, fit for dogs of all shapes and sizes. We also carry the latest trends in collars, leashes and engravable pet name tags.

We are located on the Southeast corner of County Line and University in Highlands Ranch, Colorado. Call or Stop by today for an appointment!

Revalidate

Relearning Syntax

- Attribute quotes “not really” required
- UPPERCASE and lowercase HTML elements allowed
 - So is CaMeLcAse typing.
- No more need to do self-closing tags like `` or `
`
- Also, no more minimalization. So, this is okay: `<dl compact>`
- Basically, everything that was bad from HTML4 in XHTML5 is good again.
 - Full circle, baby!

DIV ID="header"

DIV ID="nav"

DIV ID="section"

DIV ID="article"

DIV ID="sidecolumn"

DIV ID="footer"

<HEADER>

<NAV>

<SECTION>

<ARTICLE>

<ASIDE>

<FOOTER>

ARTICLE **vs** ASIDE **vs** SECTION

- Marc Grabsanki says:
 - Article is unique content to that document
 - Section is a thematic grouping of content, typically with a heading - pretty generic
 - Aside is content that is tangentially related, like a sidebar
div has no meaning whatsoever, so there is nothing semantic about divs

ArtiCLE vs ASIDE VS SECTION

- Bruce Lawson says:
 - Aside is for something tangentially related to its parent element. Or, if a sibling to the main content, it can be used to make sidebars of navigation, recent comments, colophons, author bios etc.
 - Article is a discrete piece of content that could be syndicated - a blog post, a news item, a comment, a widget
 - Section can also contain articles. for example, you could have a page with a <section> full of entertainment articles, and a section of political news etc.

ArtiCLE vs ASIDE VS SECTION

- Molly Holzschlag says:
 - `<section>` clarifies `<div>`
 - `<article>` 'replaces' `<div id="content">`
 - `<aside>` 'replaces' `<div id="sidebar">`
- Chris Mills plays it safe:
<http://boblet.tumblr.com/post/130610820/html5-structure1>

What about the **DIVs**?

- Marc:
 - “div has no meaning whatsoever, so there is nothing semantic about divs”
- Bruce says:
 - “Like all semantic questions, it depends on the context. If your only reason for wanting an element is to group stuff for styling, it's a div.”

About This Entry

Latest release:

Version 1.1 fills in some of the gaps by testing for more exciting HTML5 features like localStorage, Web Workers, applicationCache and more...

[Read the full release notes](#)

What is Modernizr?

Have you ever wanted to do if-statements in your CSS for the availability of cool features like border-radius? Well, with **Modernizr** you can accomplish just that! The syntax is very intuitive, too:

```
.multiplebgs div p {
  /* properties for browsers that
  support multiple backgrounds */
}
.no-multiplebgs div p {
  /* optional fallback properties
  for browsers that don't
  support multiple backgrounds */
}
```

Modernizr detects support for:

- @font-face
- Canvas ✓
- Canvas Text ✓
- HTML5 Audio ✓
- HTML5 Video ✓
- rgba() ✓
- hsla() ✓
- border-image: ✓
- border-radius: ✓
- box-shadow: ✓
- Multiple backgrounds ✓
- opacity: ✓
- CSS Animations ✓
- CSS Columns ✓
- CSS Gradients ✓
- CSS Reflections ✓
- CSS 2D Transforms ✓
- CSS 3D Transforms ✓
- CSS Transitions ✓
- Geolocation API
- localStorage ✓
- sessionStorage ✓
- Web Workers ✓
- applicationCache ✓
- Input Types[†]
- Input Attributes[‡]

A green checkmark behind a feature indicates your current browser supports this.

Modernizr also enables you to use more semantic elements from the HTML5 spec, even [documentation for](#)

Version: 1.1

Matt's 'mission accomplished'

The 'celebration service' for Staff Sgt. Matt Maupin is over, and his body is now at Montgomery's Gate of Heaven cemetery for a private burial

- Today's photos: SSgt Maupin funeral
- Today's photos: Funeral preparations
- Events, maps, parking, road closings | [More](#)

Children see mother killed

Moments after watching a woman shoot his mother, a boy lay on her blood-covered body. His young sister ran after him to do the same.

Reaching across lines

The Reading and Three Rivers school districts are the latest in a growing list of Greater Cincinnati districts to offer open enrollment.

Reds snap skid

It looked like the Reds were going to breeze, with a 10-5 lead going to the bottom of ninth. Then the bullpen made it interesting.

- Statistics make key points

Striping

Normal Flow

- While normal flow is the default method of rendering a page, the placement of the elements can be altered
 - Floats
 - CSS position property
 - Values: absolute, relative, fixed or static

Absolute Positioning

- When an element is absolutely positioned, it is taken out of normal flow and positioned relative to the edges of its containing box, according to its offset properties.
- Absolutely positioned elements are ignored by other elements within normal flow.

Technique of the Month

Massage News

One of the most common questions I get as a massage therapist is "Is my mind working on your client's feet?" My answer is always not at all. Feet can often hold clues to imbalance in other areas of the body. Reflexology a technique created and studied by Eunice Ingham in the early 1930's shows a correlation between the bottom of the foot and its connection to the rest of the body. When a person comes to my office for a reflexology session we begin with a medical intake and some discussion of health concerns and goals for the session. You will be lying on a massage table, often propped up with pillows for your comfort. I encourage my clients to wear comfortable clothing. I use a small amount of lotion to begin the session with some

Tips for healthy living

Relaxation techniques are such an important tool to have to get us through these often hectic and stressful days. Progressive relaxation, developed by Edmund Jacobson, is a great way to bring awareness to the body, allowing it to feel the difference between tension and relaxation. You can

Quote of the Month

"Only when the clamor of the outside world is silenced will you be able to hear the deeper vibration. Listen carefully"

- Sarah Ban Breathnach

Question of the Month

Q: What are the educational

Relative Positioning

- When an element is *relatively* positioned, it is initially placed within normal flow, and then adjusted according to its offset properties.
- ```
#positioned {
 position: relative;
 top: 50px;
 right: 30px;
 background-color: #eee;
}
```

Lorem [ipsum dolor](#) sit amet, consectetur adipiscing **elit**. Nullam mauris nibh, lacinia a, sagittis non, sollicitudin id, est. Nam rhoncus tortor at augue. Suspendisse potenti. Aliquam ornare, leo eu tempor aliquet, mi massa interdum lectus, et ultrices mauris augue eget elit.

Pellentesque nec felis. Donec nec quam. Aliquam vestibulum quam at est. Mauris mi. In et erat. Nulla venenatis ligula eu pede.

viverra in, suscipit sed, massa. Phasellus metus. In imperdiet nunc vitae est. Praesent nunc. Sed nonummy eleifend purus. Donec justo erat, lobortis sit amet, semper ac, hendrerit vel, justo. Sed dapibus, augue id rutrum interdum, augue leo accumsan ante, dapibus volutpat ligula nunc eget augue.

# Relative Positioning

- The browser lays out the paragraphs according to normal flow, then offsets the positioned paragraph 50 pixels from the top, and 30 pixels from the right of its default position.
- And like absolute positioning, relatively positioned elements can overlap other elements.
- Note that if you don't specify any offset properties for a relatively positioned element, it is placed according to normal flow.

```
article {
 display: block;
 width: 955px;
 margin: 0 auto;
 position: relative;
 height: 650px;
}

```

# Why Encode Data?

- If we did our homework ahead of time, we can save processing time.
- With [SXSWCSS3.com](http://SXSWCSS3.com), store the longitude and latitude to with data attributes:
  - Keep from using the Google API saving processes and time.
- With CSS Flag, store which state was a colony and the order it was admitted to the union.

# Why Encode Data?

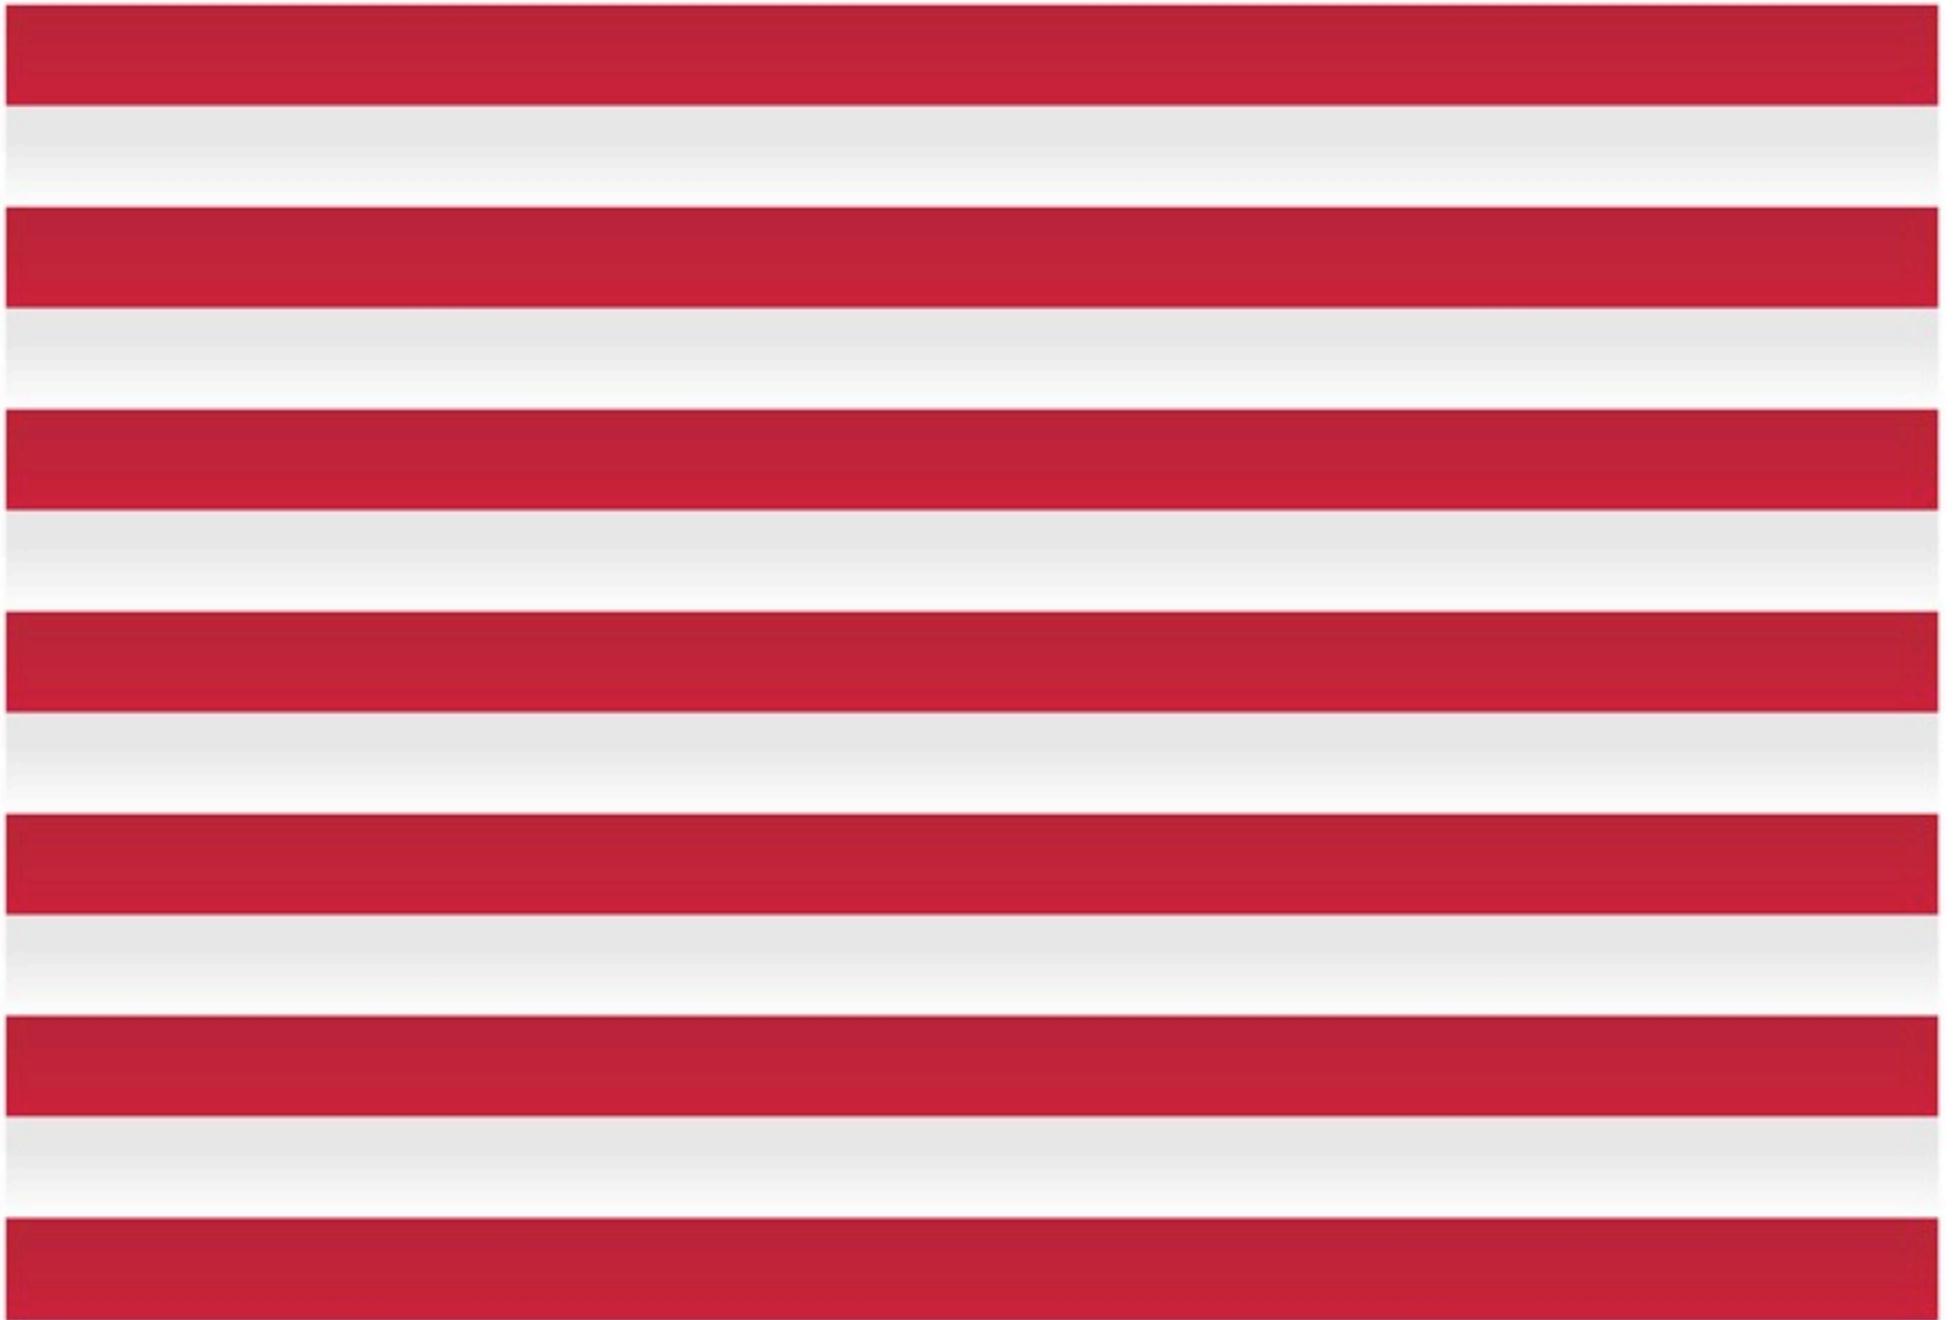

- With CSS Flag, store which state was a colony and the order it was admitted to the union.
- Plus, we get additional “HTML hooks” for our CSS selectors
- Ergo, stripes!

# Subtle Gradients

- But I need some serious CSS3 to keep my boss interested and my friends from laughing at me.
- No worries!
- Let's look into subtle gradients.

```
div[data-colony="2"], div[data-colony="4"],
div[data-colony="6"], div[data-colony="8"],
div[data-colony="10"], div[data-colony="12"] {
 background-image: -webkit-gradient(
 linear, left bottom,
 left top,
 color-stop(0, rgb(255,255,255)),
 color-stop(0.69, rgb(227,227,227))
);
 background-image: -moz-linear-gradient(
 center bottom,

<http://wiki.novemberborn.net/sifr3>
- Image Replacement Rundown:  
<http://mezzoblue.com/tests/revise-image-replacement/>
- Text-indent method “Google-safe”
  - Or is it?

# Subtle Gradients

```
h3 a {
 background-image: -webkit-gradient(
 linear,
 left bottom,
 left top,
 color-stop(0, rgb(0,40,104)),
 color-stop(0.5, rgb(3,27,64))
);
 background-image: -moz-linear-gradient(
 center bottom,
 rgb(0,40,104) 0%,
 rgb(3,27,64) 50%
);
}
```

# Stars

A photograph of a starry night sky. The stars are densely packed and appear in various colors, including blue, white, and yellow. A semi-transparent white rectangular box is overlaid on the left side of the image, containing the word "Stars" in a bold, black, sans-serif font. The background is a dark, deep blue/black space filled with numerous bright points of light.

# Previous Solution

```
a[href="http://www.alabama.gov/"] i {
 background-image: url(stars.gif);
 display: block;
 position: absolute;
 top: 13px;
 left: 13px;
 z-index: 50;
 width: 24px;
 height: 23px;
}
```

# Previous Solution

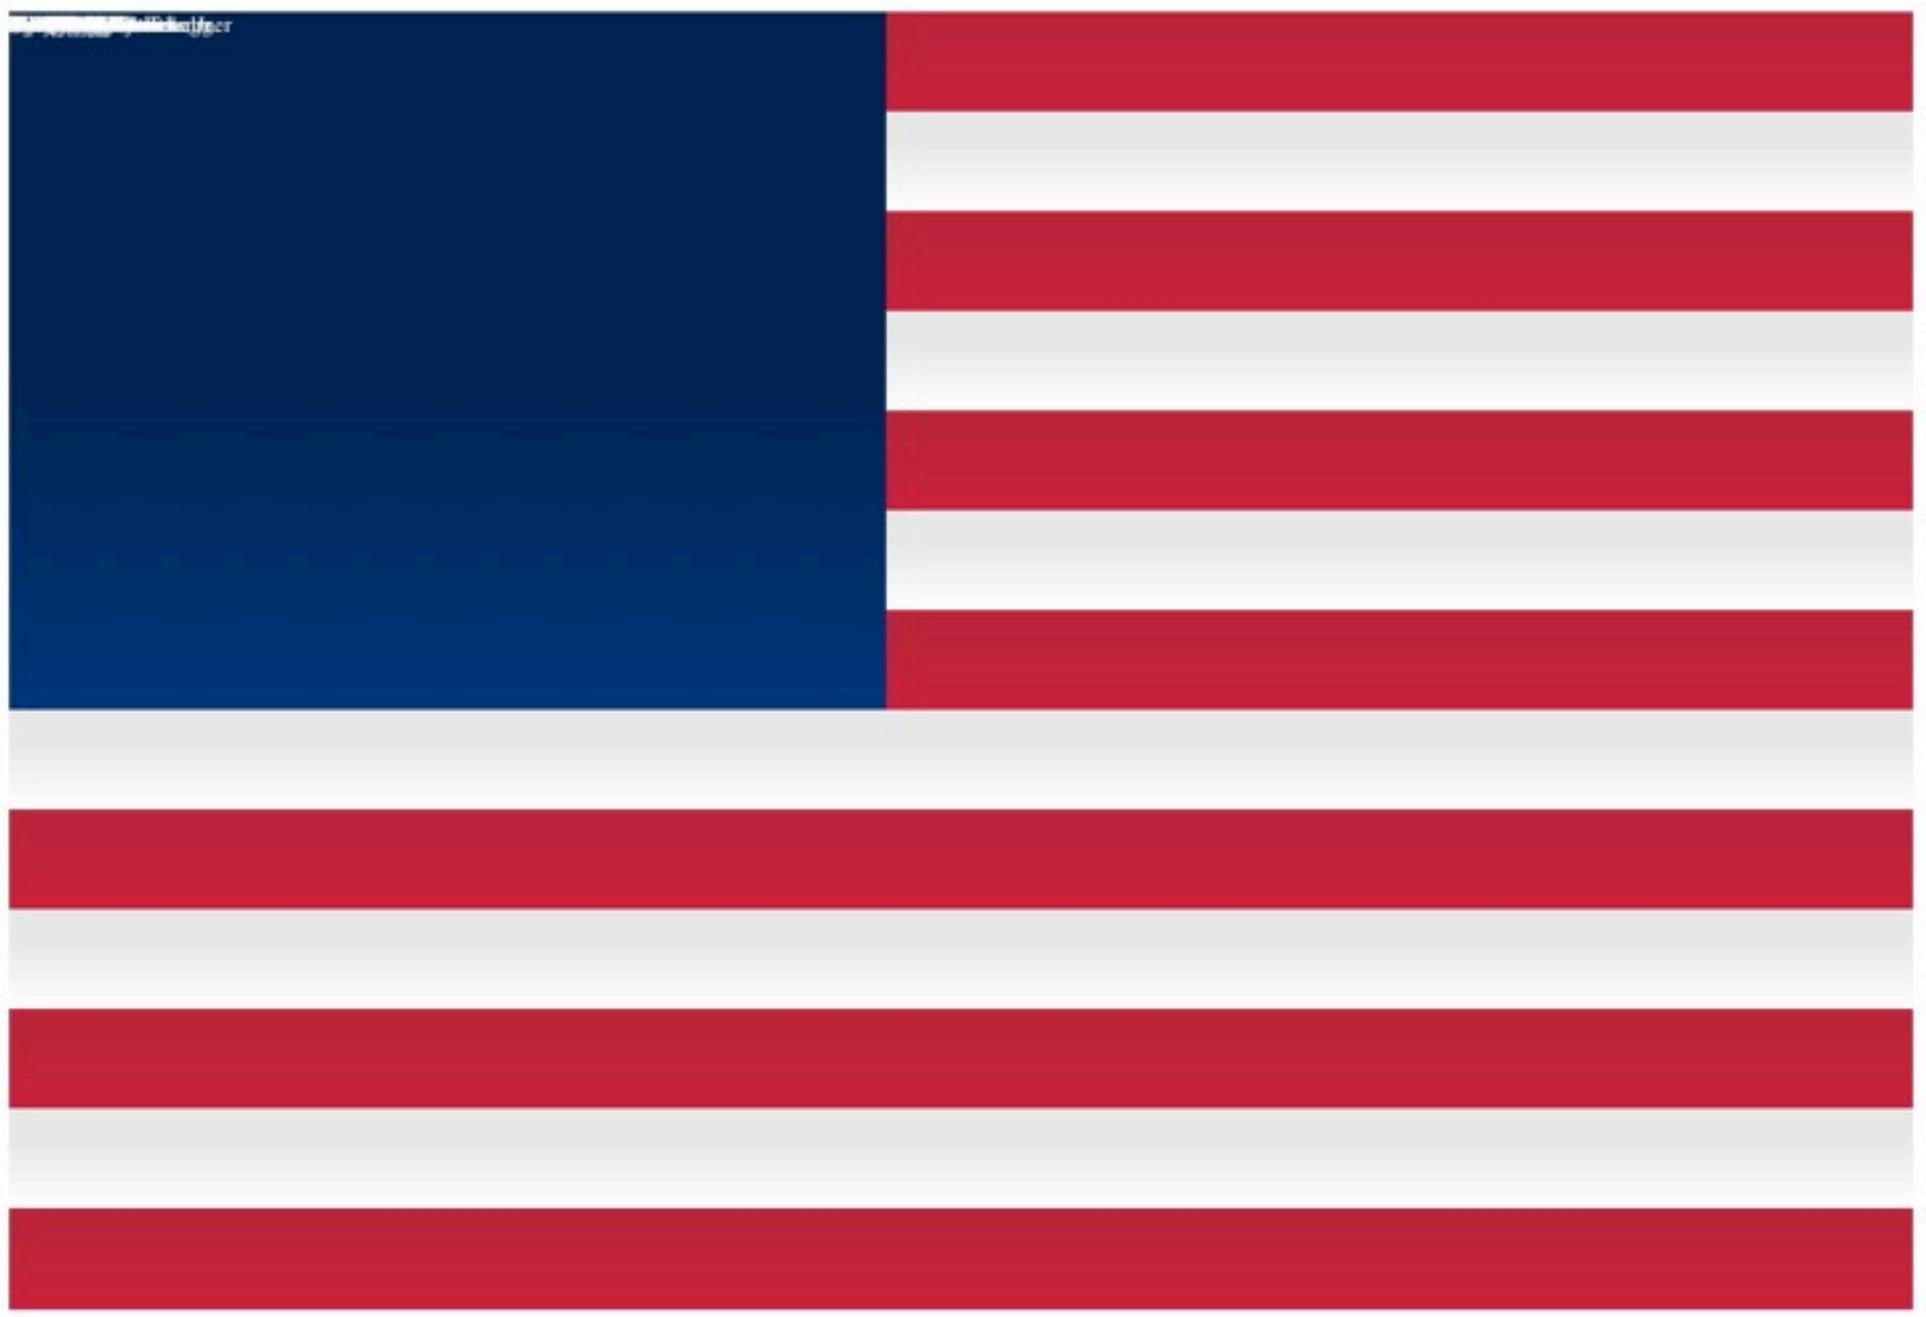

- Insert nested presentational element (albeit small)
- Change it's display to block
- Set width and height
- Place star graphic in the background
- Then position stars in the correct space

# New Solution

- Avoid inserting presentational markup
- Avoid adding image
- Do something cooler than last year
- Everything else? Yeah, pretty much the same, but cool.

# Adding Stars

```
a.fn {
 position: absolute;
 z-index: 50;
 display: block;
 color: #fff;
}
```

# Position “Stars”

```
/* First Row */
li:nth-child(1) a.fn {
 top: 13px;
 left: 13px;
}
li:nth-child(2) a.fn {
 top: 13px;
 left: 90px;
}
li:nth-child(3) a.fn {
 top: 13px;
 left: 167px;
}
...
```

## TOOLS

[Font Squirrel RSS](#)[BOOKMARK](#)[Stumble It!](#)

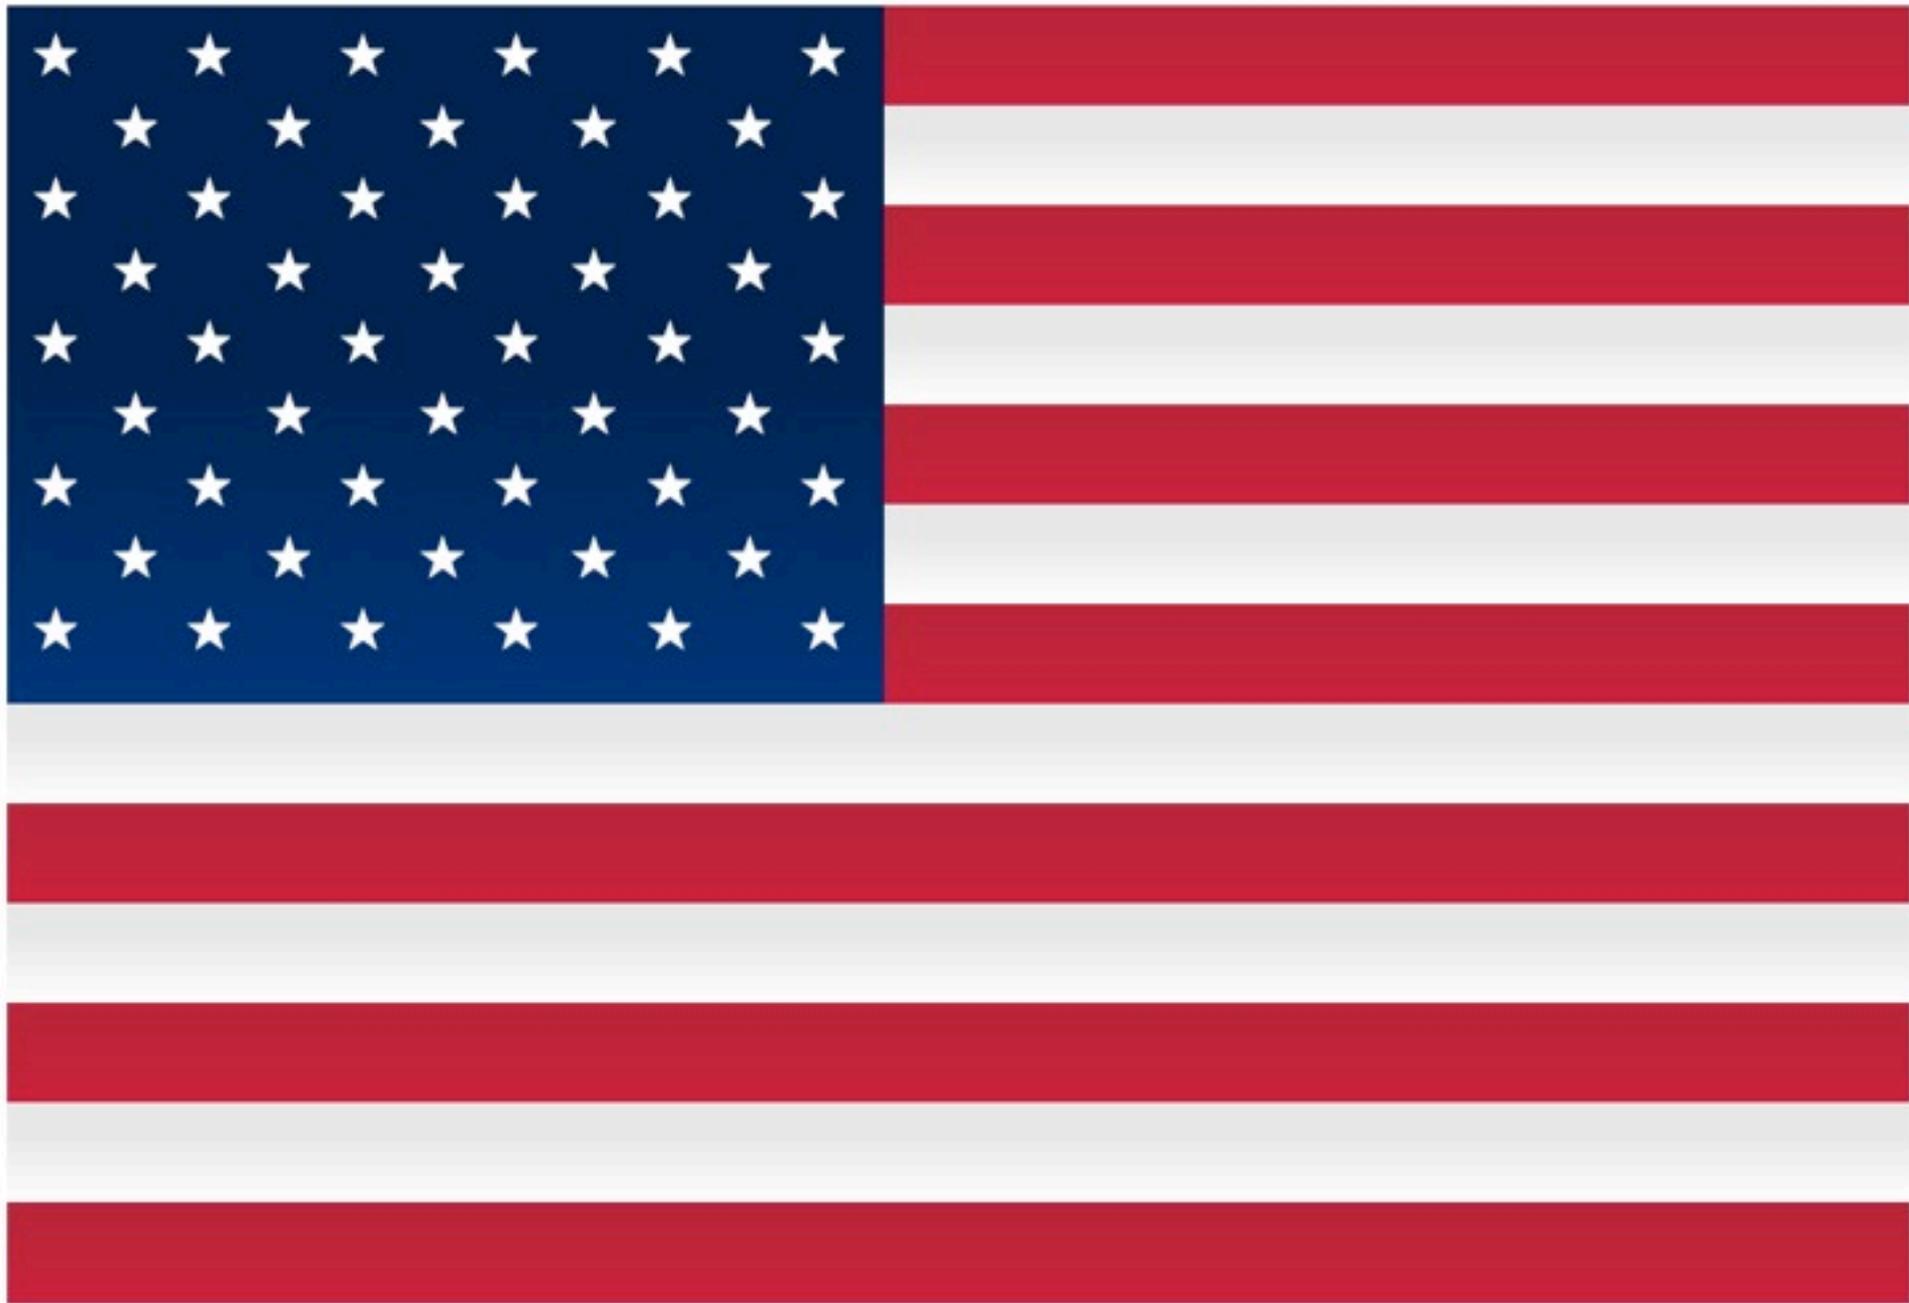

# Adding Stars

```
a.fn:before {
 font-weight: normal;
 font-style: normal;
 line-height: normal;
 font-family: 'SeeingStarsRegular',
 sans-serif;
 content: "W ";
 font-size: 2em;
}
```

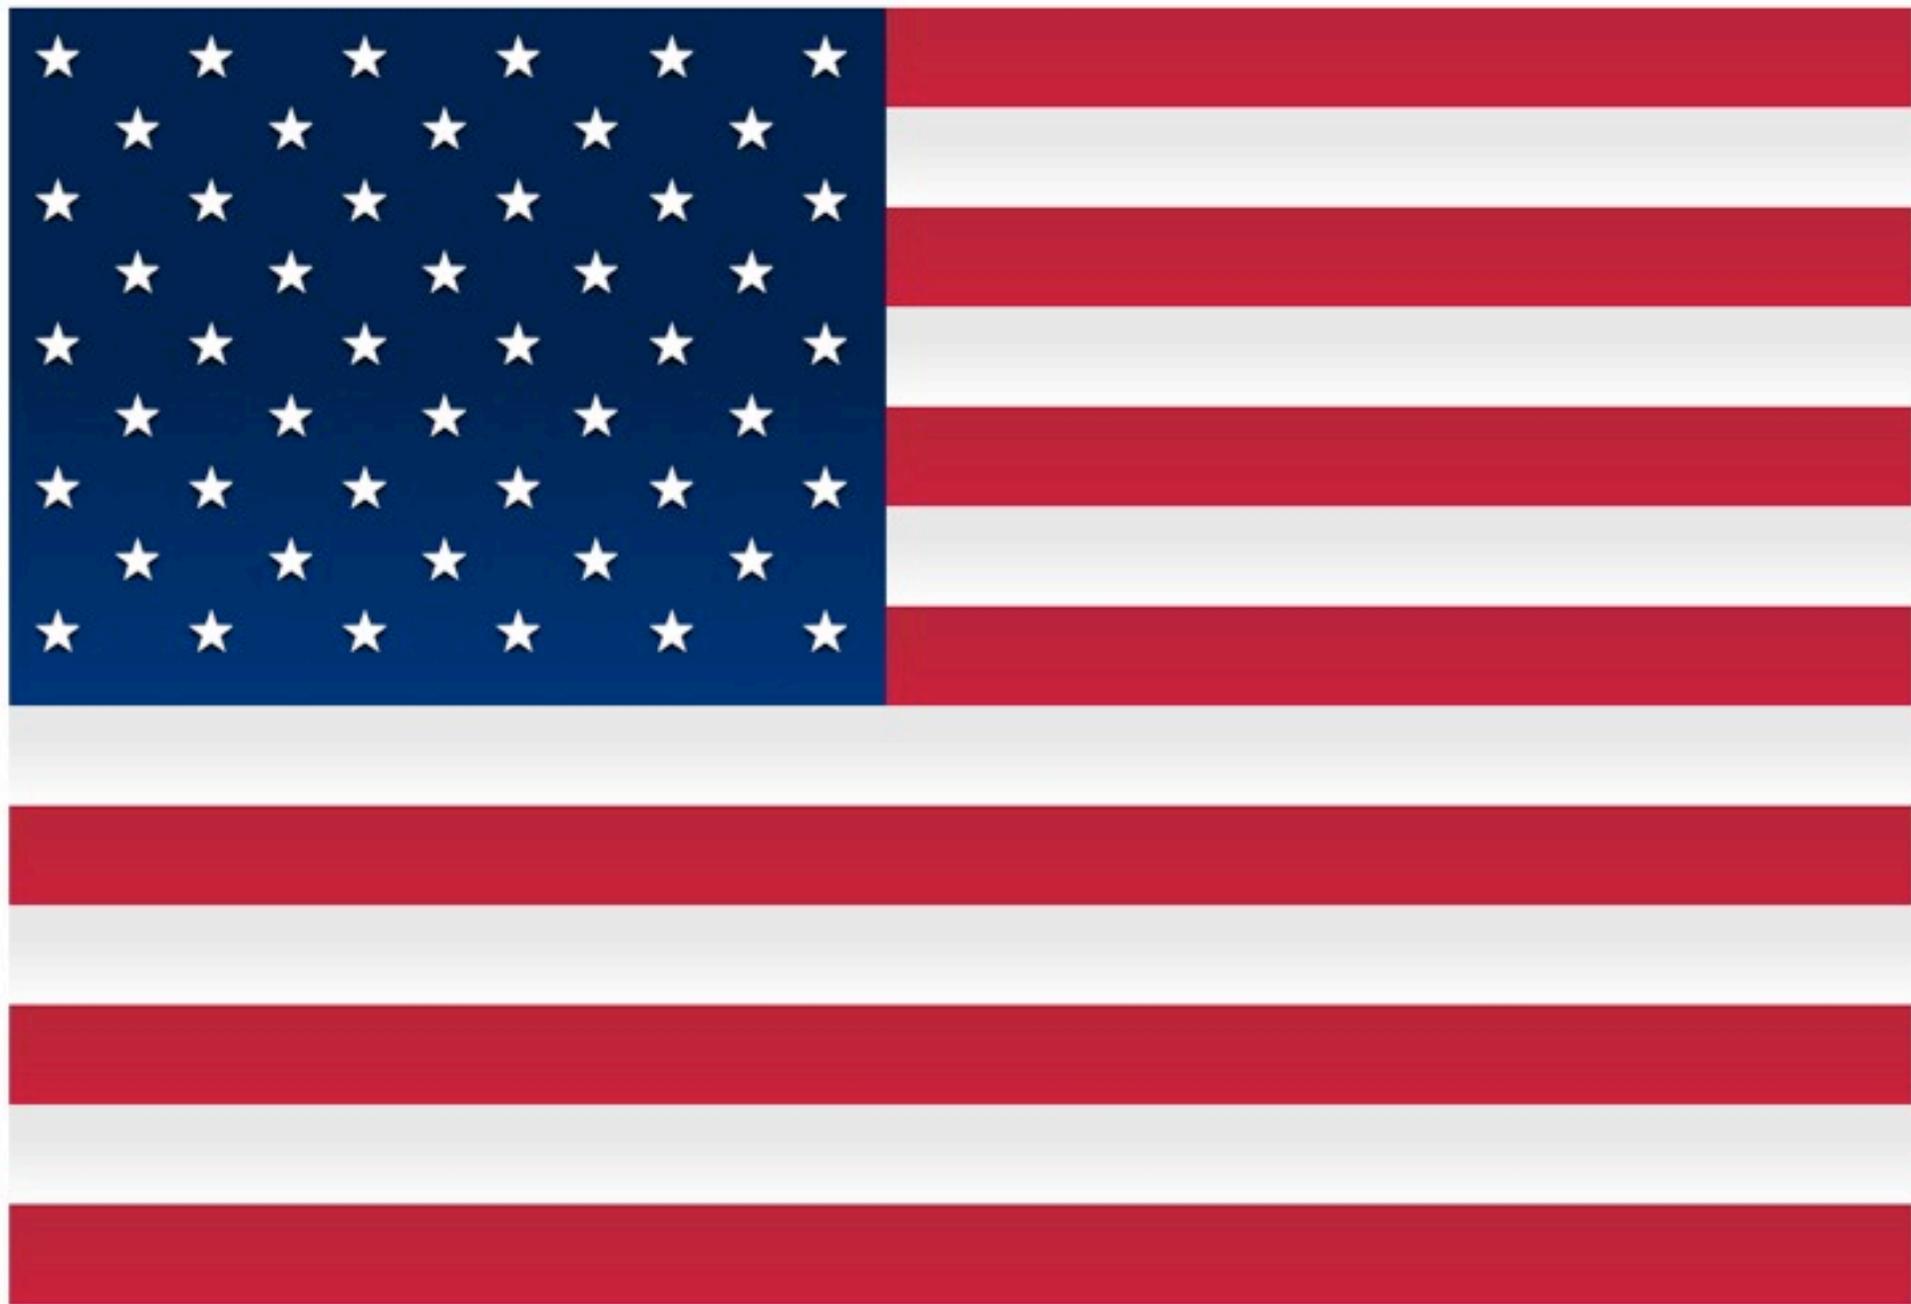

# Adding Stars

```
a.fn {
 width: 2.1em;
 height: 2.1em;
 overflow: hidden;
 position: absolute;
 z-index: 50;
 display: block;
 color: #fff;
}
```

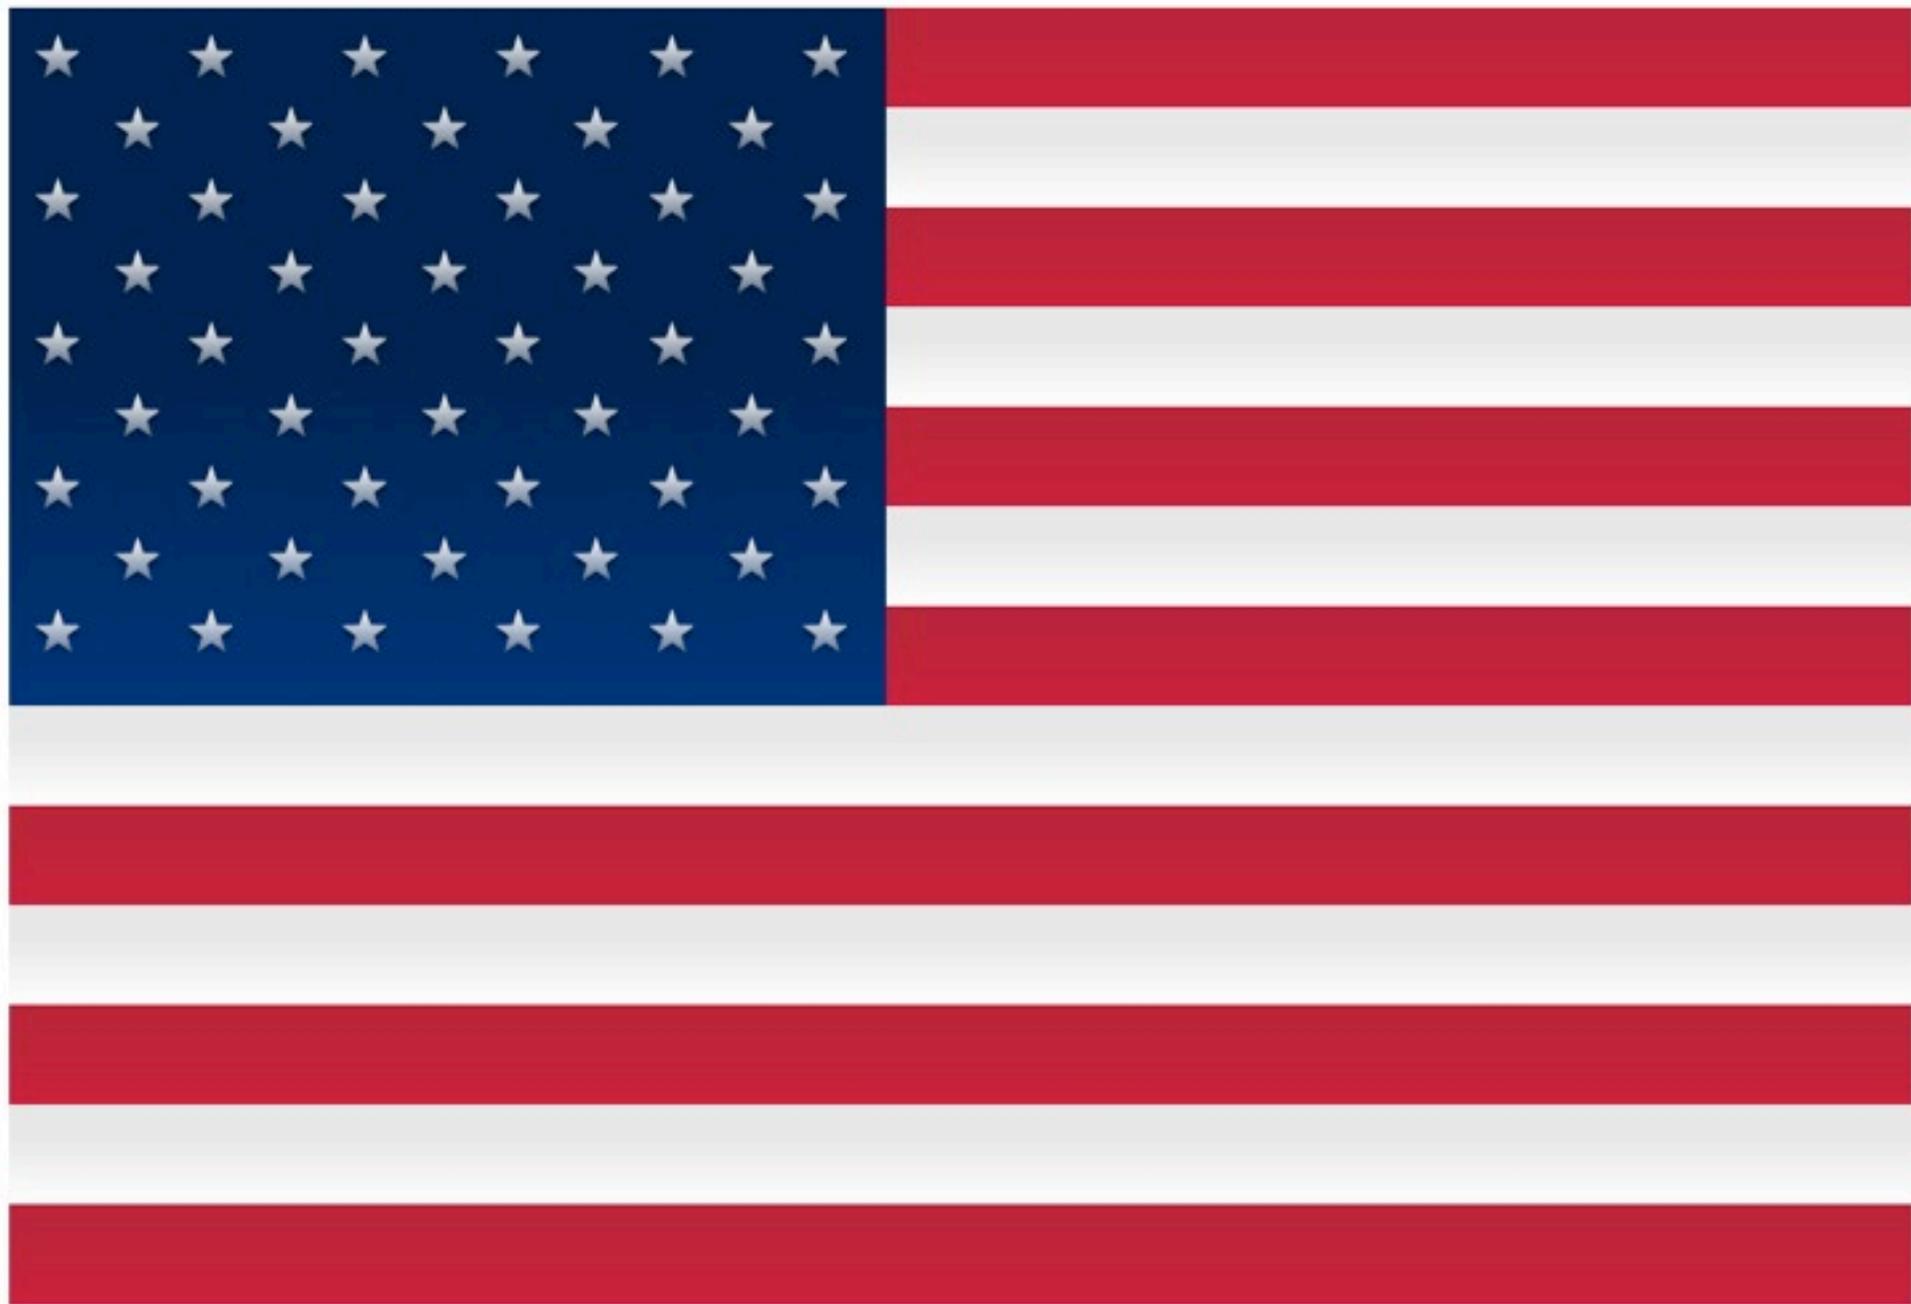

# Adding Stars

```
a.fn {
 width: 2.1em;
 height: 2.1em;
 overflow: hidden;
 position: absolute;
 z-index: 50;
 display: block;
 color: #fff;
 text-shadow: 0px 2px 1px #000;
}
```

# But what about my subtle gradients?

```
a.fn:before {
 font-weight: normal;
 font-style: normal;
 line-height: normal;
 font-family: 'SeeingStarsRegular', sans-serif;
 content: "W ";
 font-size: 2em;
 -webkit-mask-image: -webkit-gradient(linear, left top, left bottom,
 from(rgba(0,0,0,1)), to(rgba(0,0,0,.3)));
}
```

Click

# Everything Clicks

- Previous solution had every pixel of the flag clickable
- New solution has only the Union and Stars as clickable
- Due to using presentational element inside anchor: `<a><i></i></a>`
- New solution:
  - Again only one link, but would like to avoid hard coding link

# vCard Microformat

```
<div id="hcard-Jack-Markell" class="vcard">
 <a class="url fn" href="http://
delaware.gov/">Jack Markell
 <div class="org no" data-
colony="1">Delaware</div>
 <div class="adr no">
 <div class="street-address">Tatnall
Building, William Penn Street, 2nd Fl.</
div>Dover,
DE, <span
class="postal-code">19901
</div>
 <div class="tel no">(302) 744-4101</div>
</div>
```

# Enter jQuery

jquery/1.7/jquery.min.js"></script>
```

# Enter jQuery

```
<script type="text/javascript">
 $(document).ready(function() {
 $("div[data-colony]");
 }
);
});
</script>
```

# Enter jQuery

```
<script type="text/javascript">
 $(document).ready(function() {
 $("div[data-colony]").wrap();
 });
</script>
```

# Enter jQuery

```
<script type="text/javascript">
 $(document).ready(function() {
 $("div[data-colony]").wrap(function() {
 }
);
 });
</script>
```

# Enter jQuery

```
<script type="text/javascript">
 $(document).ready(function() {
 $("div[data-colony]").wrap(function() {
 return '<a href="" ' +
$(this) + ' " />';
 }
);
});
</script>
```

# Enter jQuery

```
<script type="text/javascript">
 $(document).ready(function() {
 $("div[data-colony]").wrap(function() {
 return '<a href="' +
$(this)
.parent("div").children("a:first") + '" /
>';
 }
);
});
</script>
```

# Enter jQuery

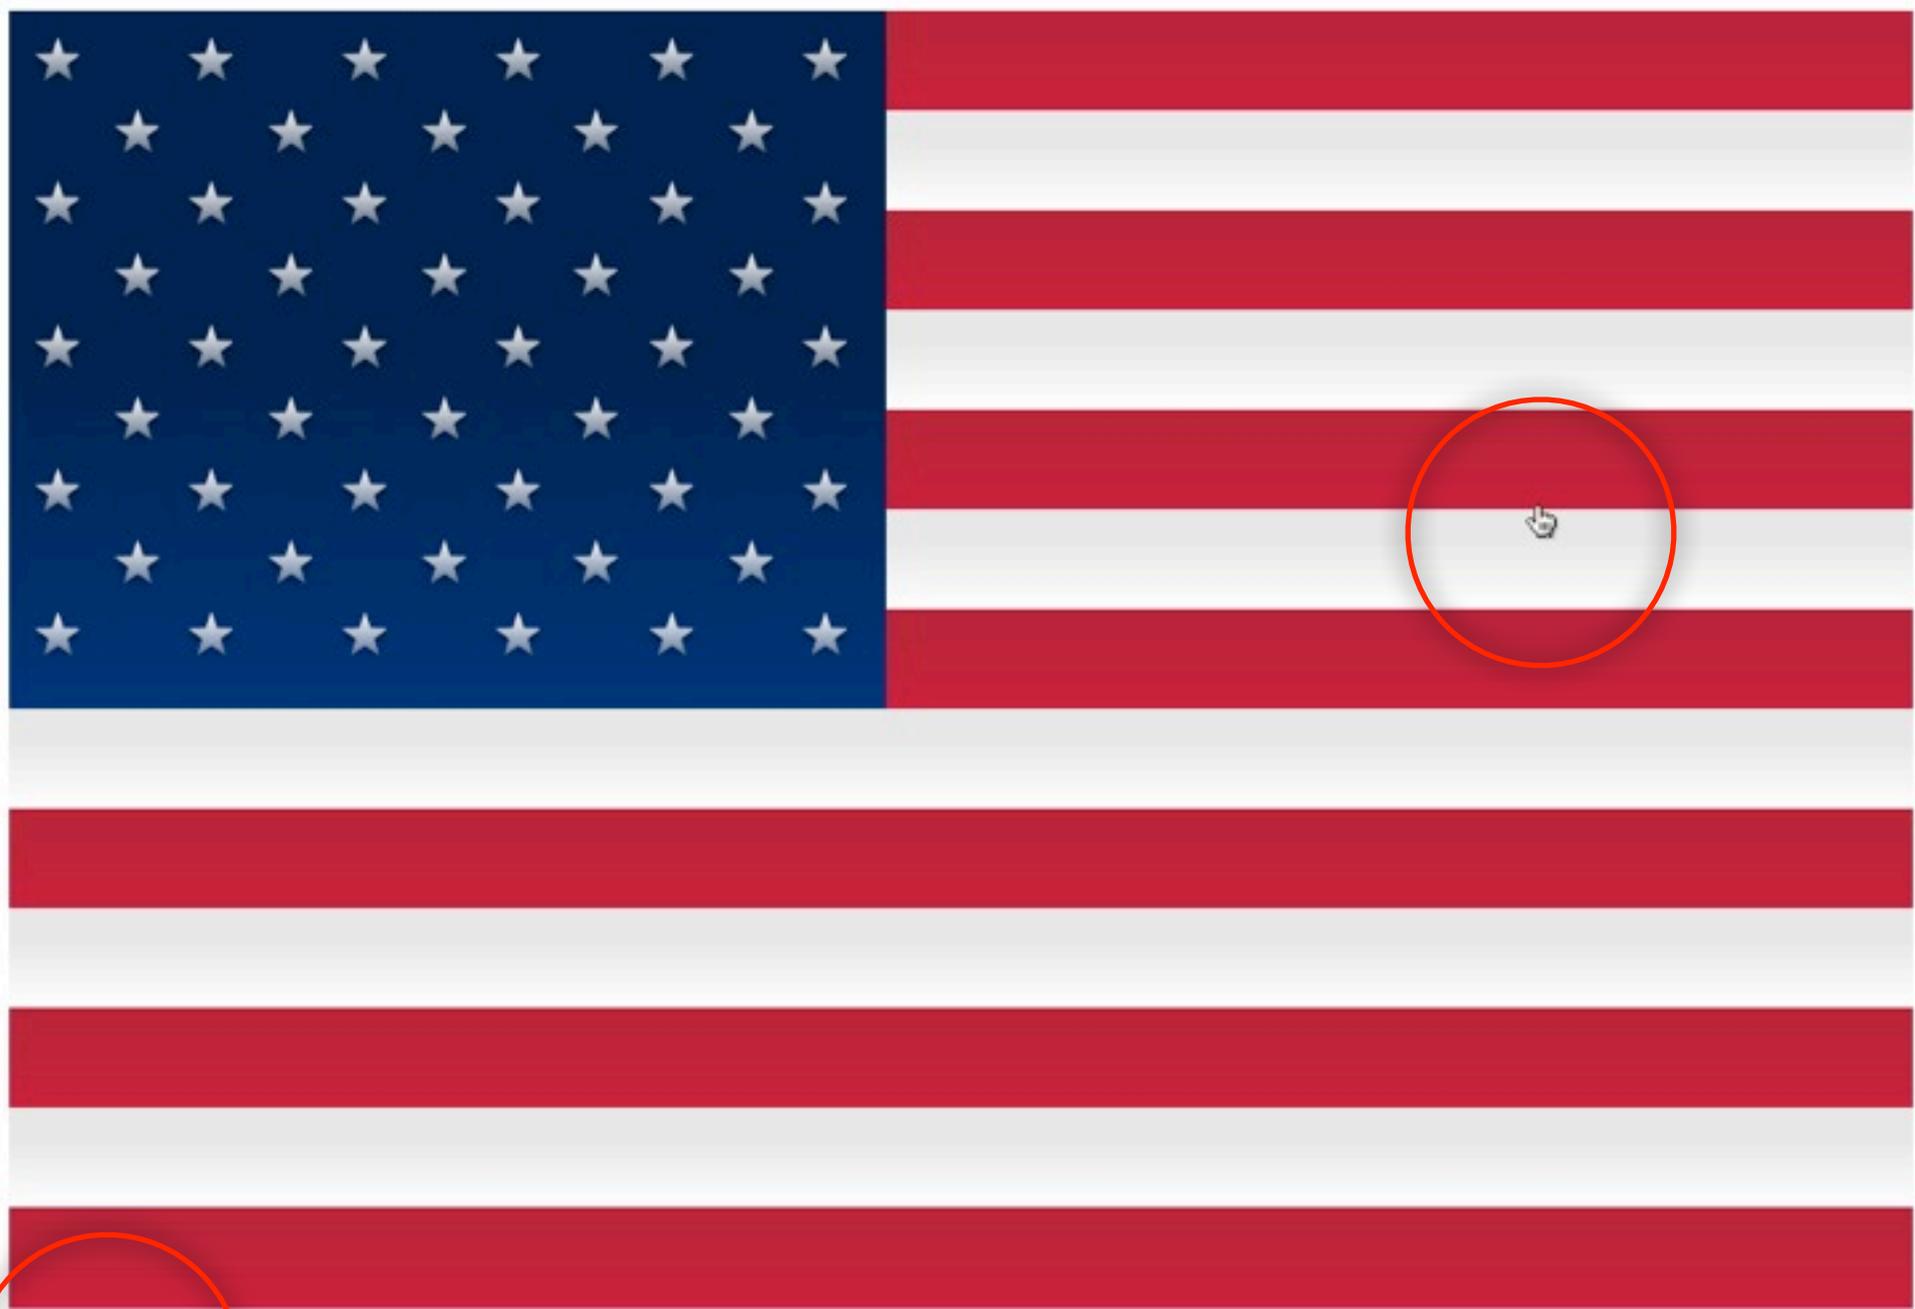

```
<script type="text/javascript">
 $(document).ready(function() {
 $("div[data-colony]").wrap(function() {
 return '<a href="' +
$(this)
.parent("div").children("a:first")
.attr("href") + '" />';
 });
 });
</script>
```

# Links around Blocks

```

 <div class="org no" data-colony="3">New
 Jersey</div>

```

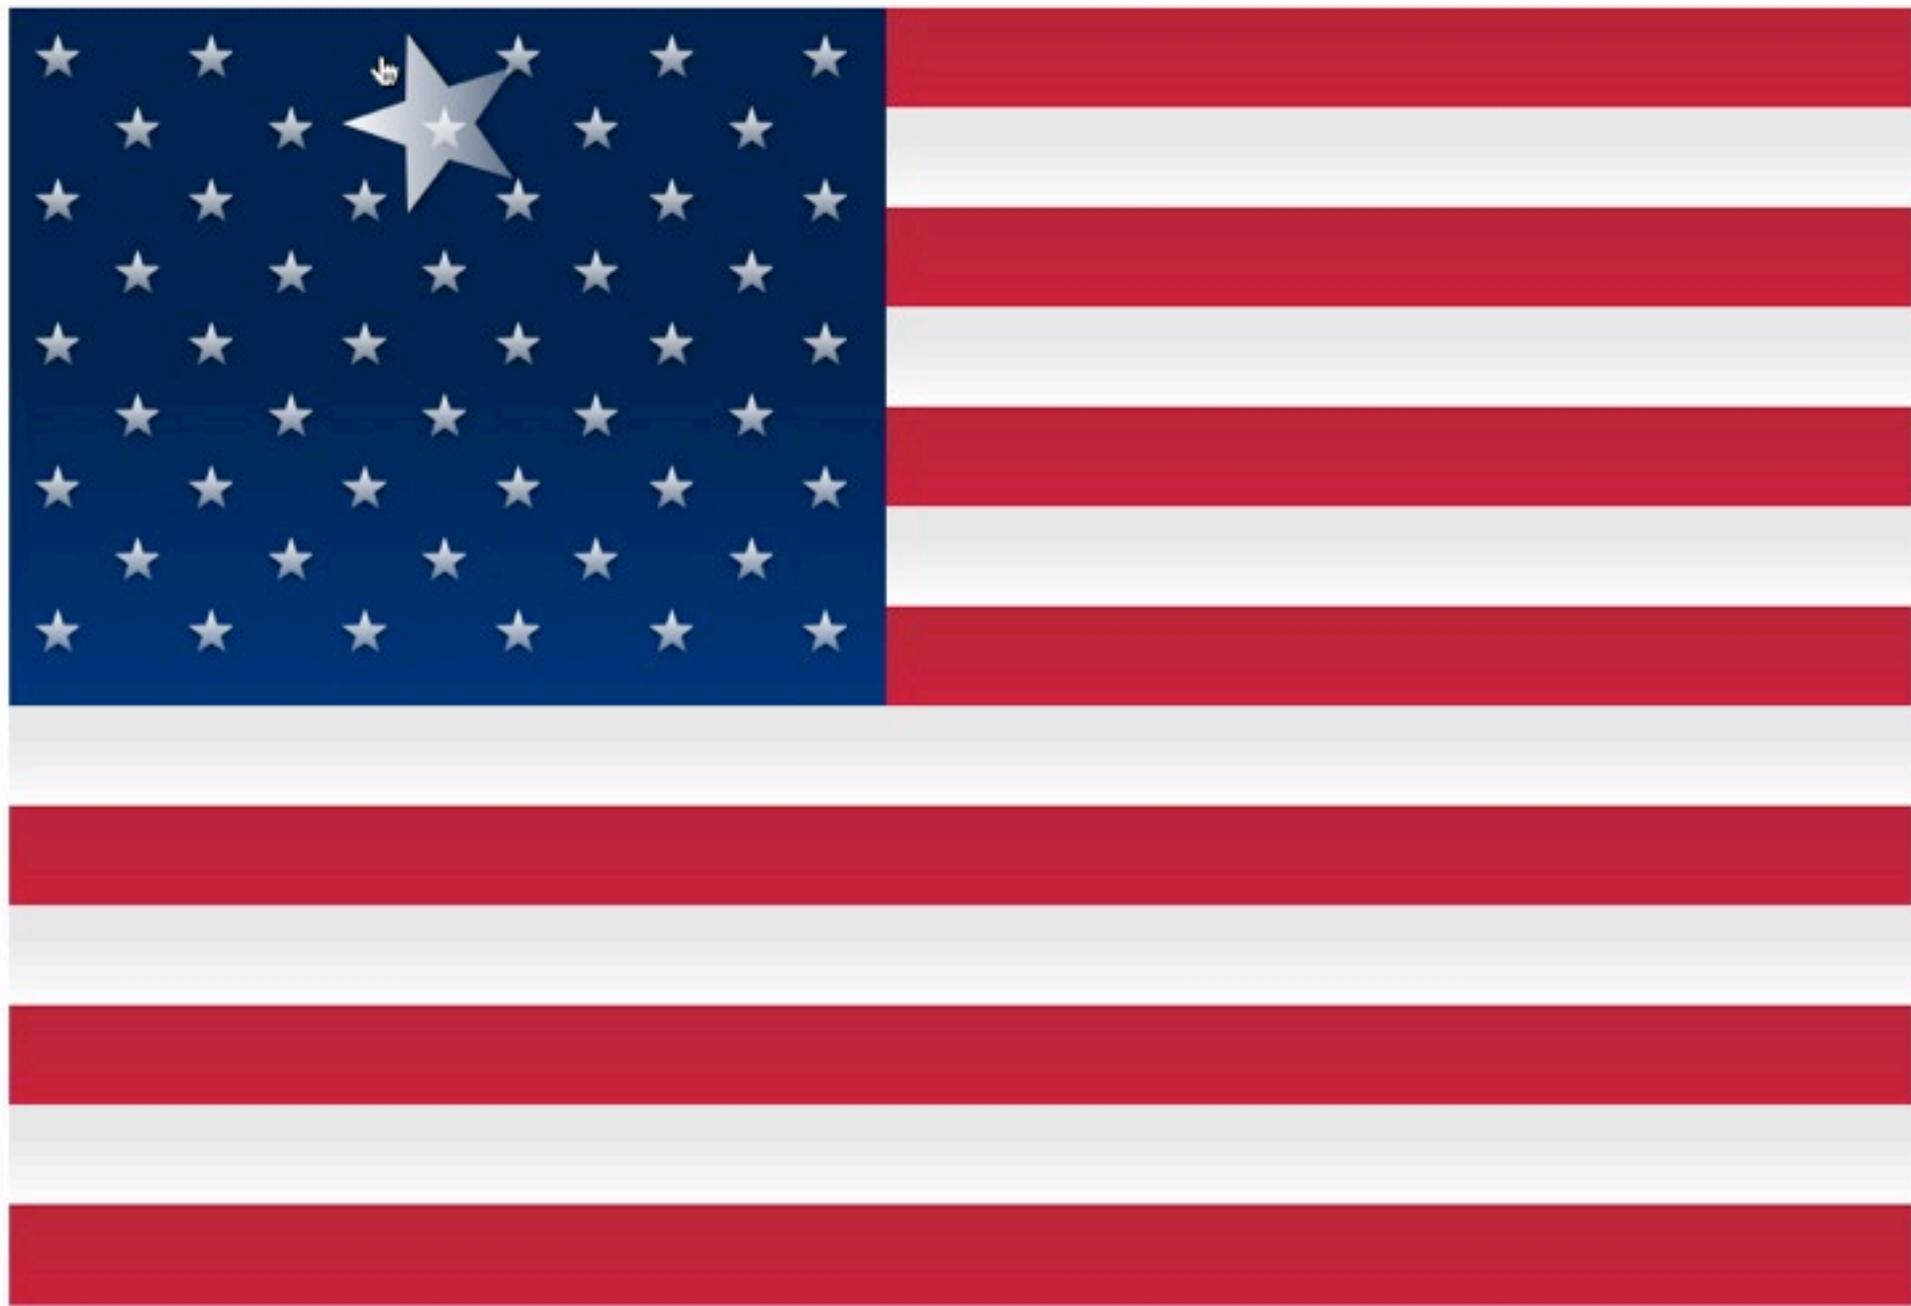

# Transform & Final Touches

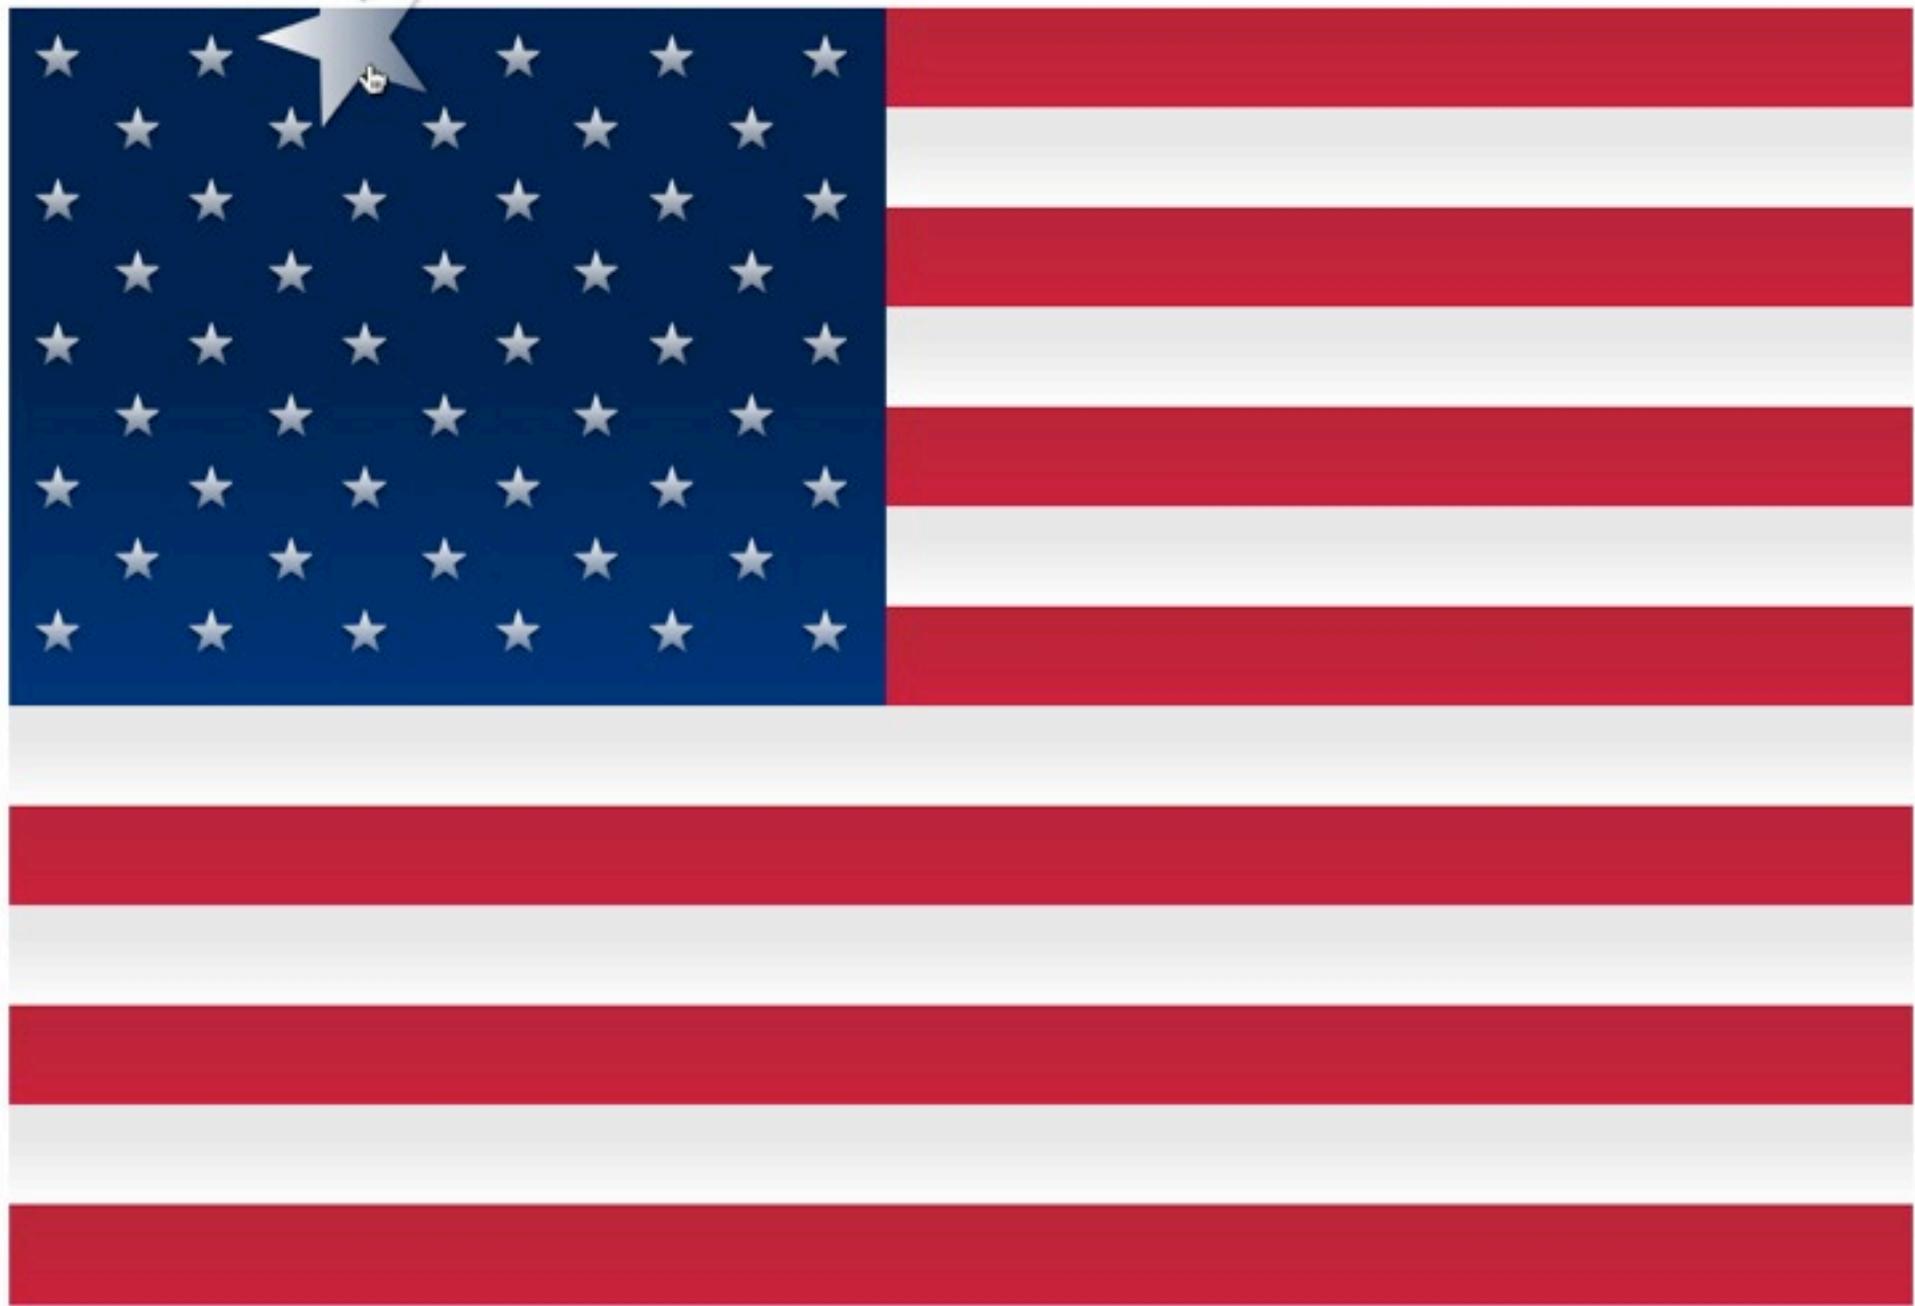

# Transform Stars

```
a.fn:hover {
 font-size: 4em;
 -webkit-transform: rotate(270deg);
 z-index: 100;
}
```

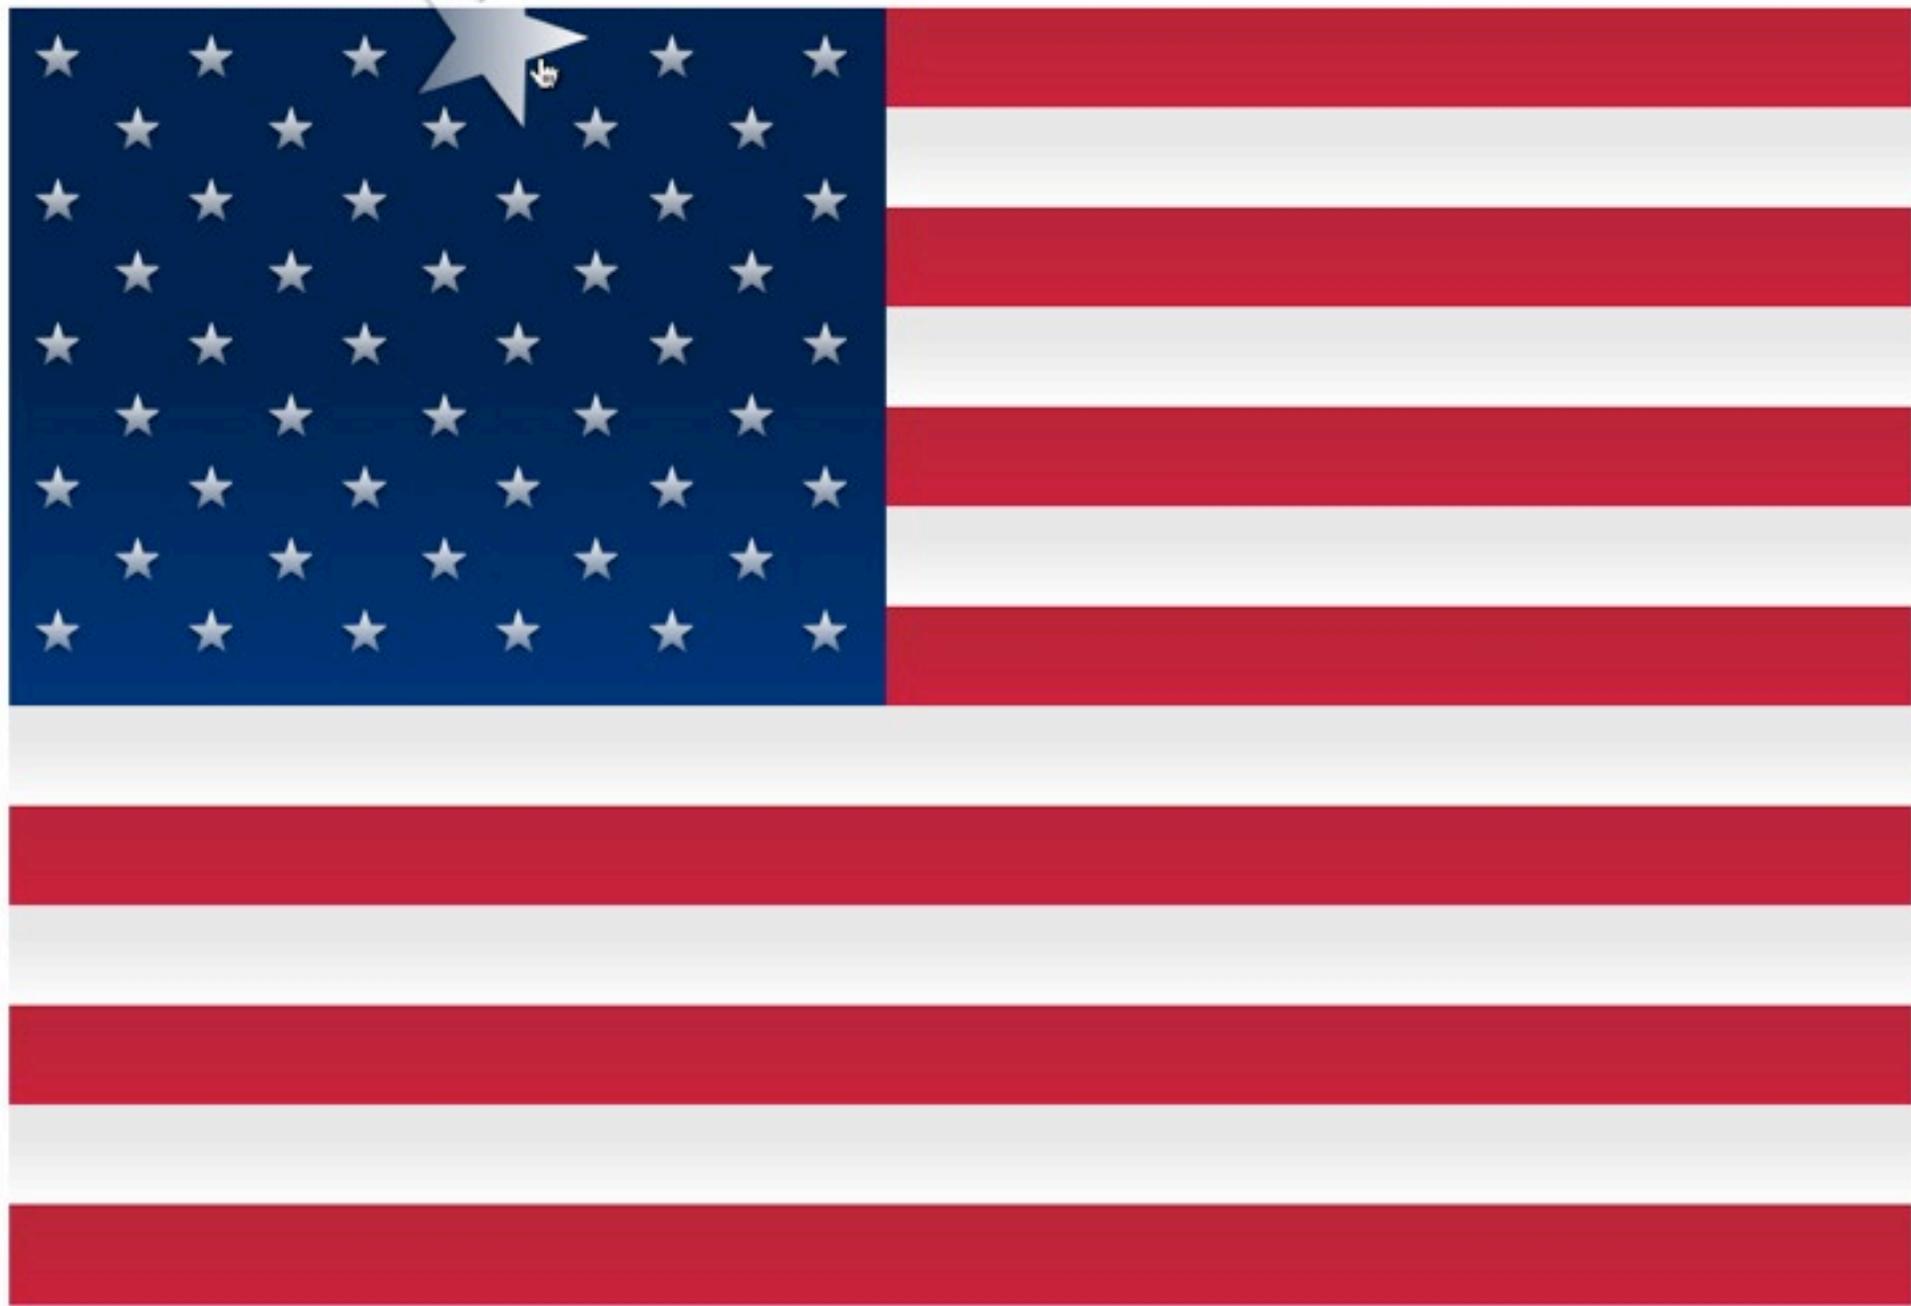

# Transform Stars

```
a.fn:hover {
 font-size: 4em;
 -webkit-transform: rotate(270deg)
 translate(1em, -1em);
 z-index: 100;
}
```

# Transform Stars

```
a.fn:hover {
 font-size: 4em;
 -webkit-transform: rotate(270deg)
 translate(1em,-1em);
 z-index: 100;
}
li:nth-child(2n) a.fn:hover {
 font-size: 4em;
 -webkit-transform: rotate(-270deg)
 translate(-1em,1em);
 z-index: 100;
}
```

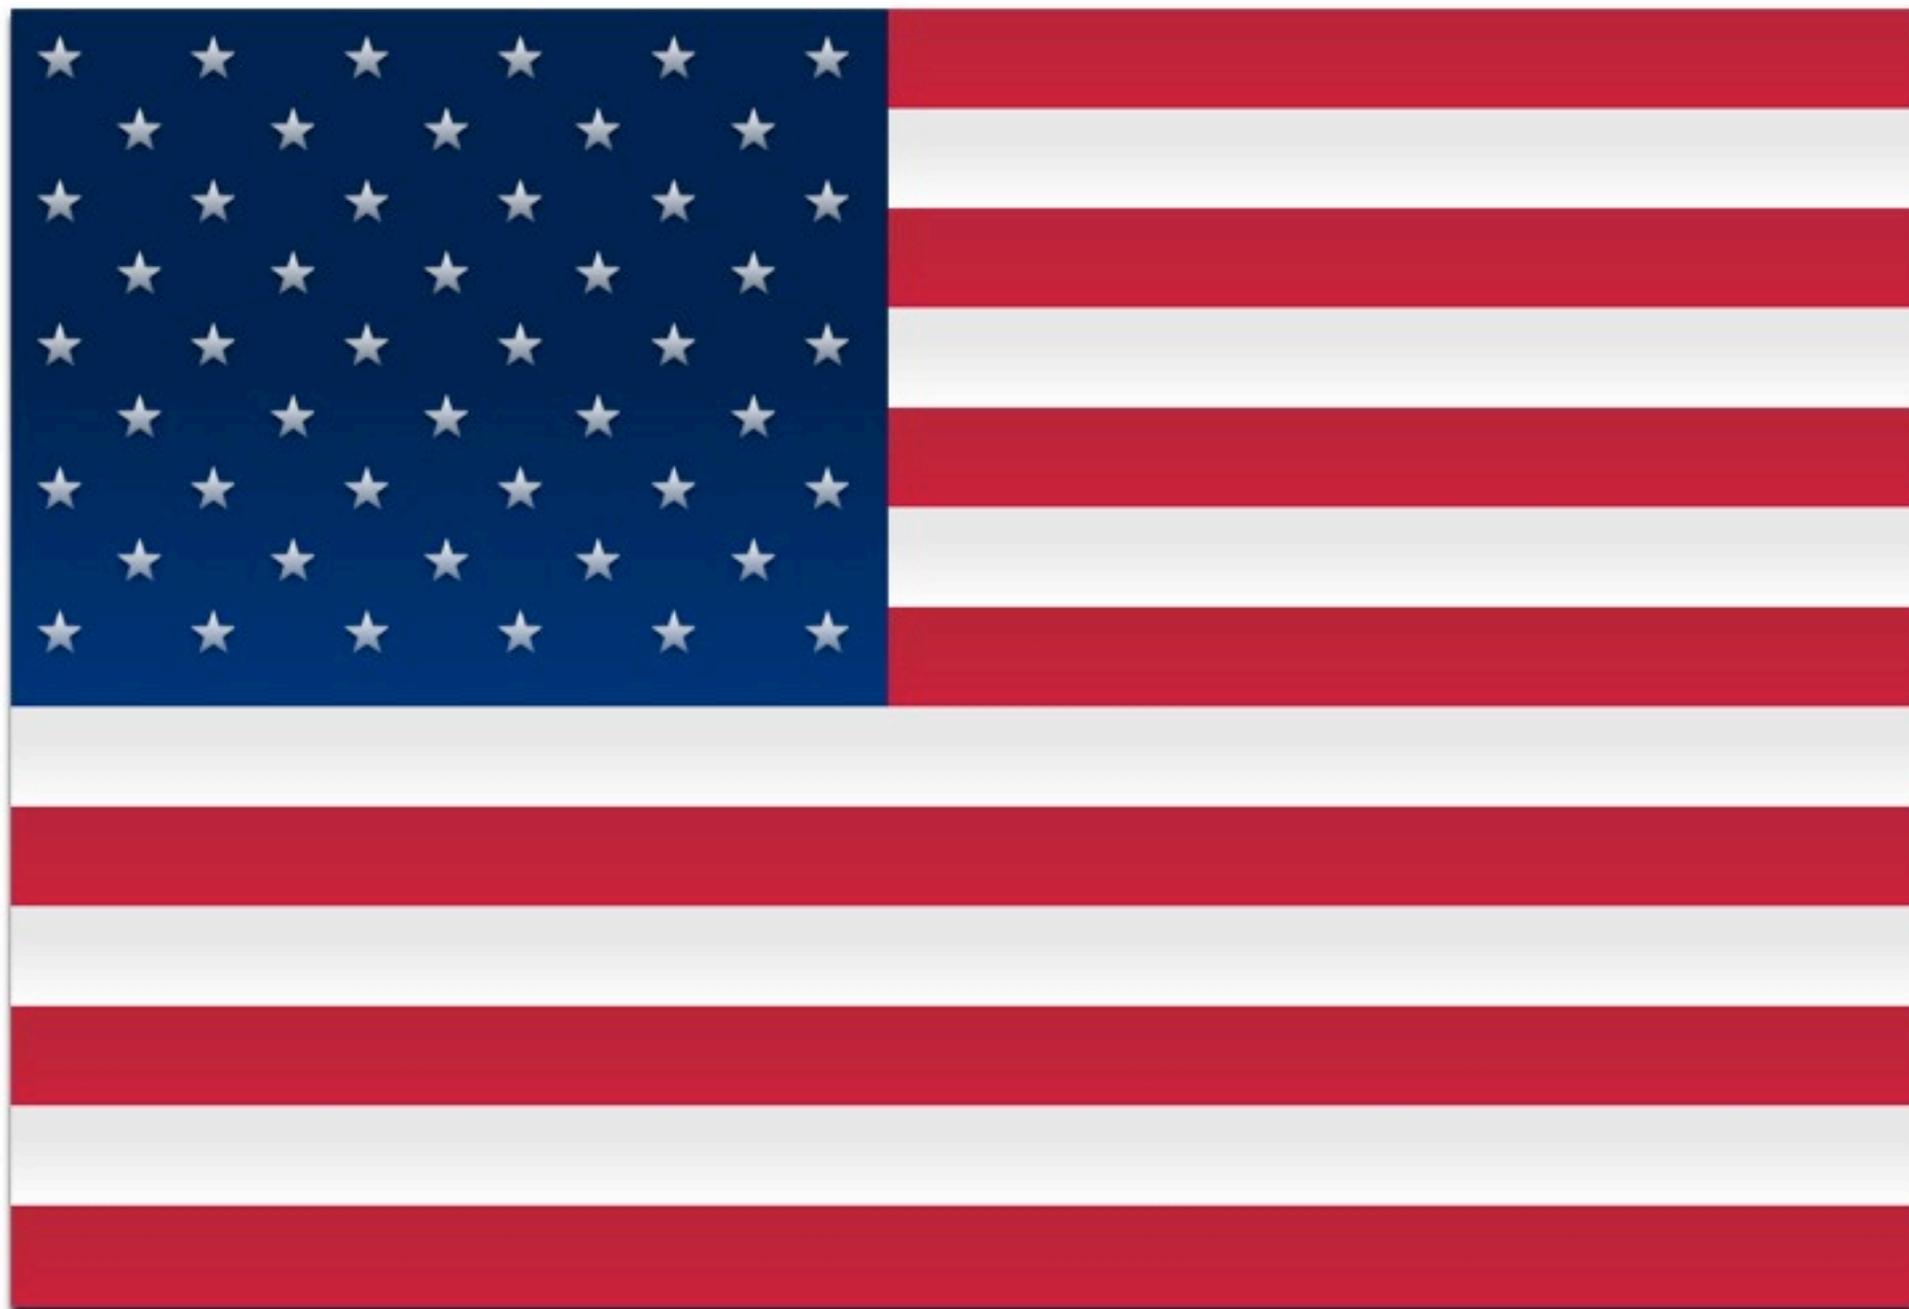

# transform-origin

- How does something rotate?
- Default is center of the object
  - but you can set the values like background-position to change the origin point
- `webkit-transform-origin: 100% 0;`

# Box-Shadow

```
article {
 display: block;
 width: 955px;
 margin: 0 auto;
 position: relative;
 height: 650px;
 -webkit-box-shadow: 0px .4em .4em black;
}
```

# Fireworks

# Fireworks

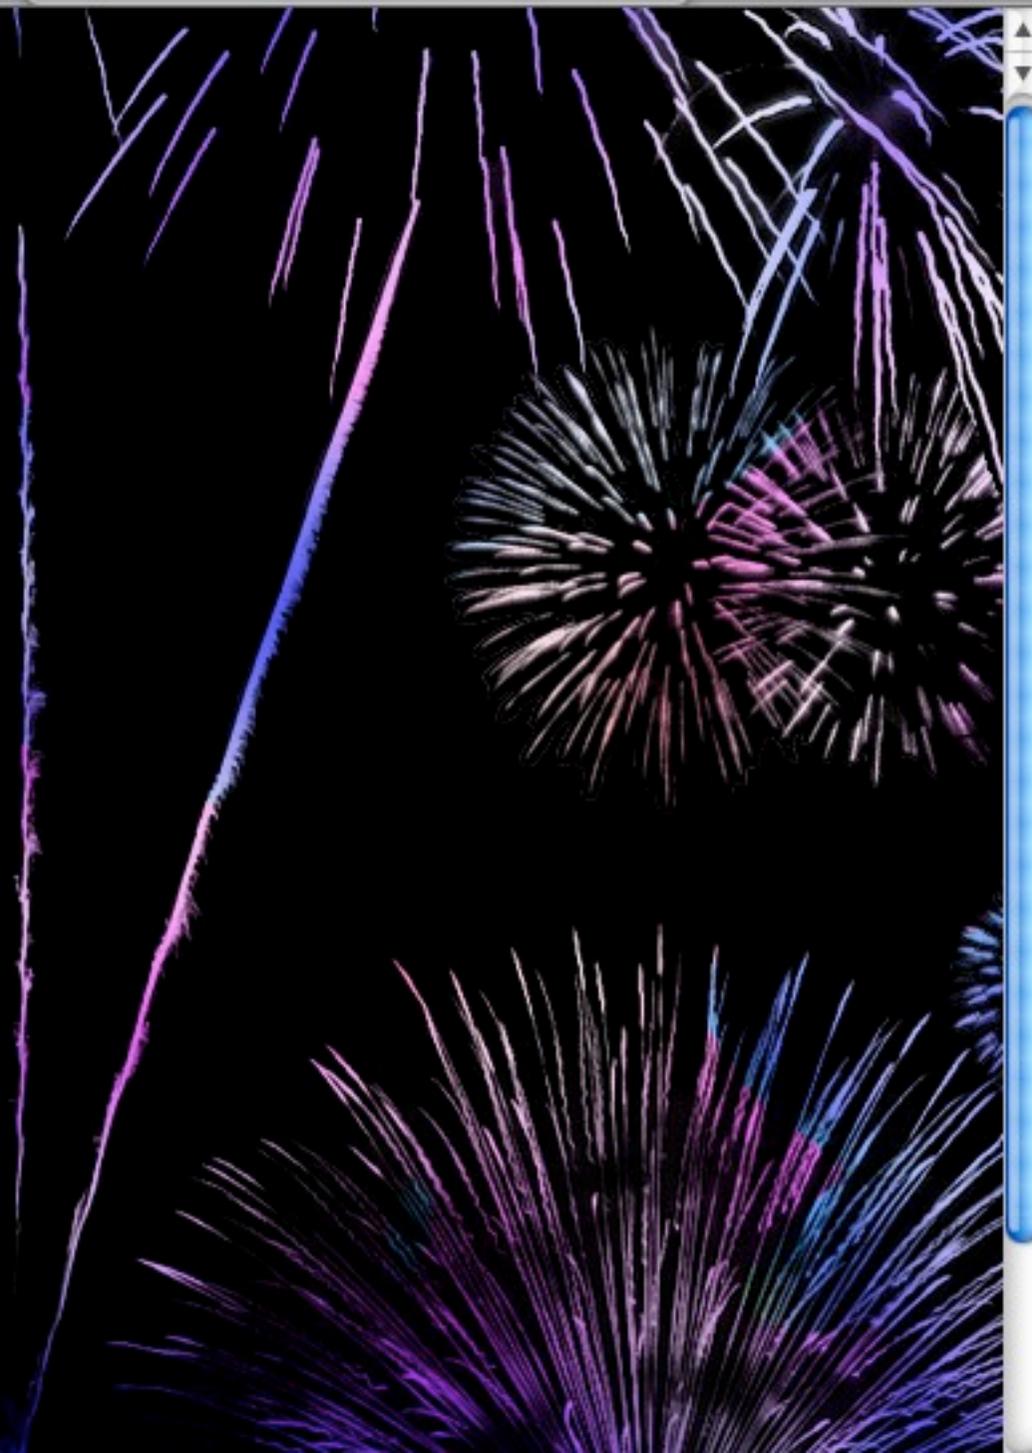

- What's the 4th of July without some fireworks?
- Let's first get two images
  - Colorful image
  - Firework mask

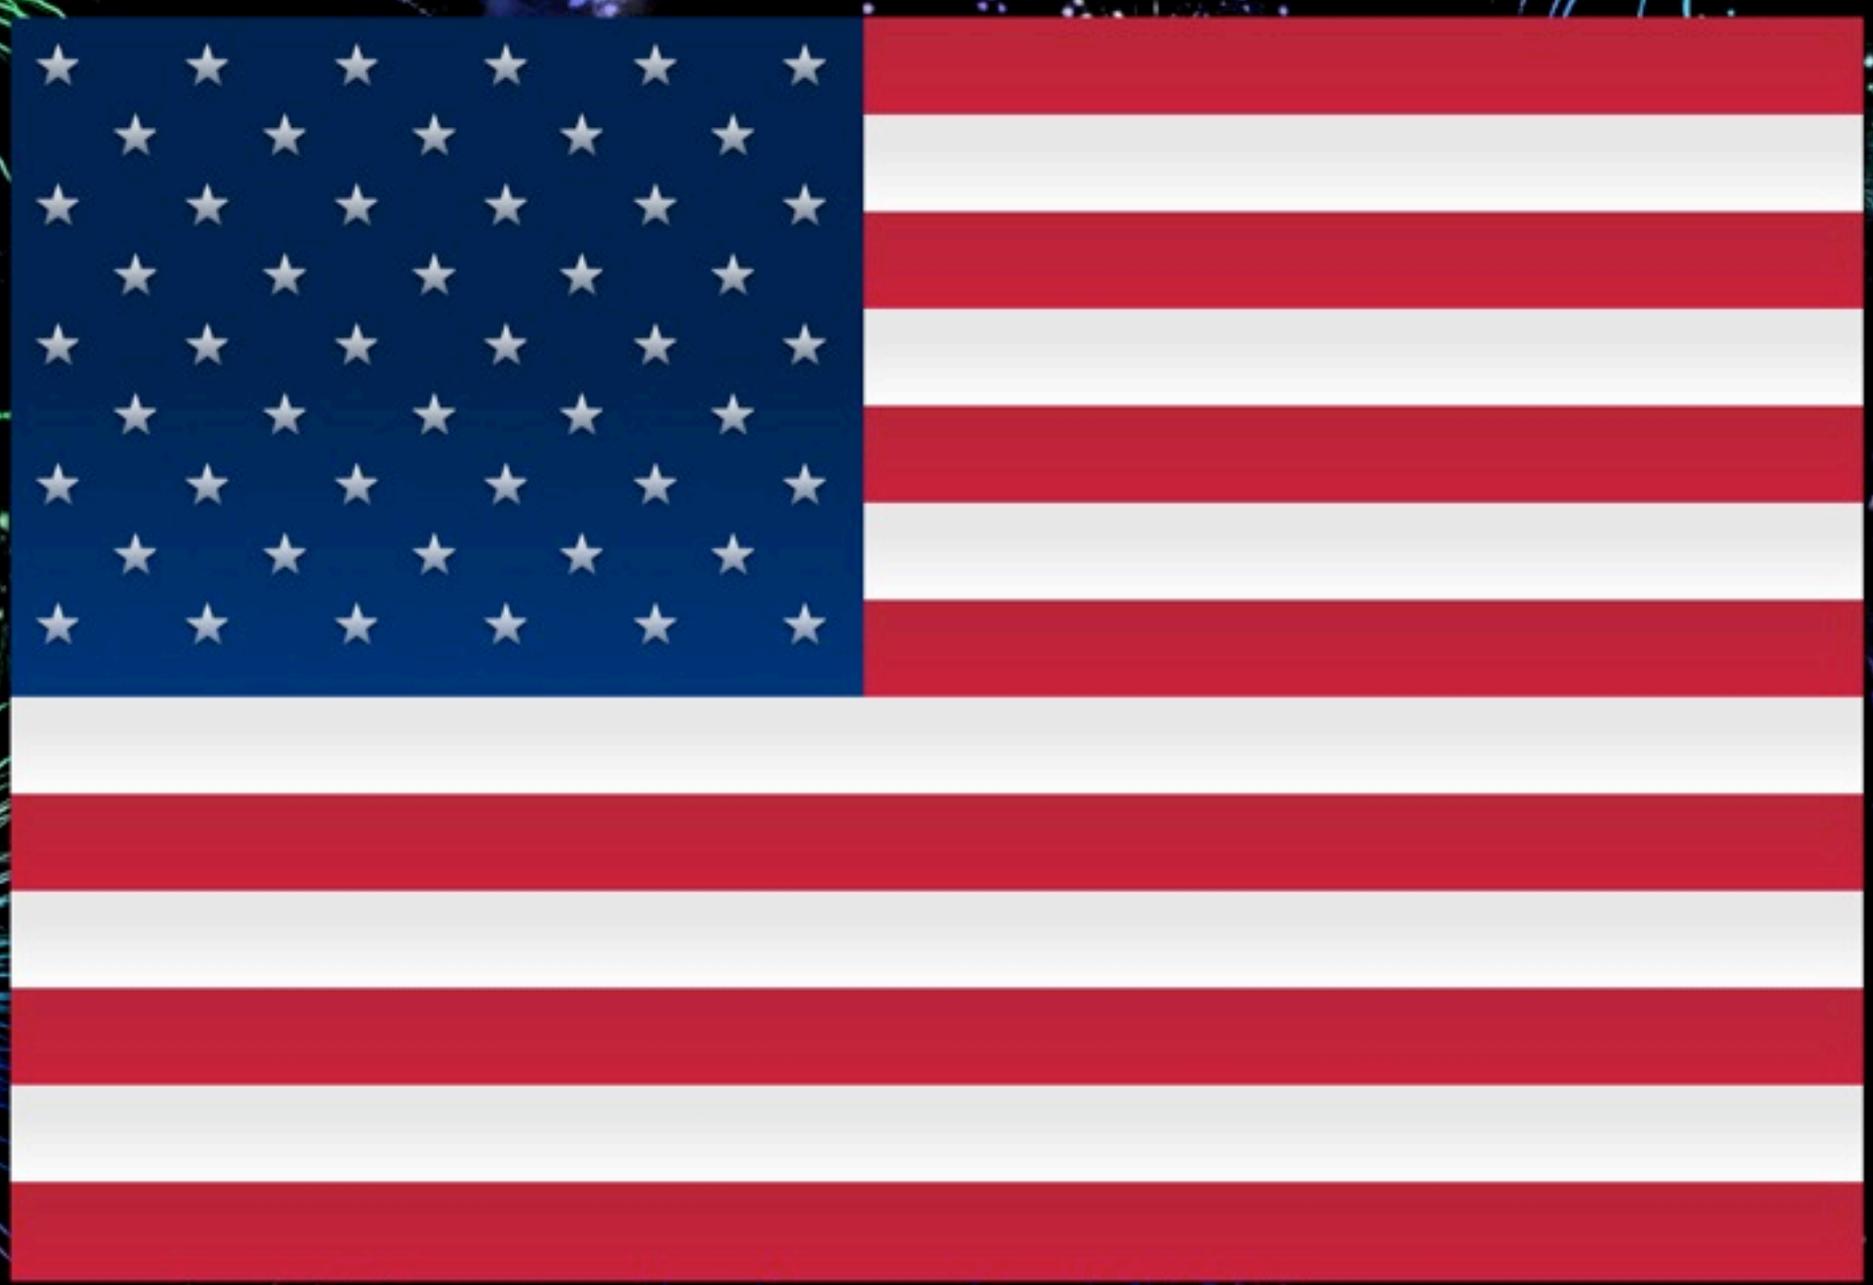

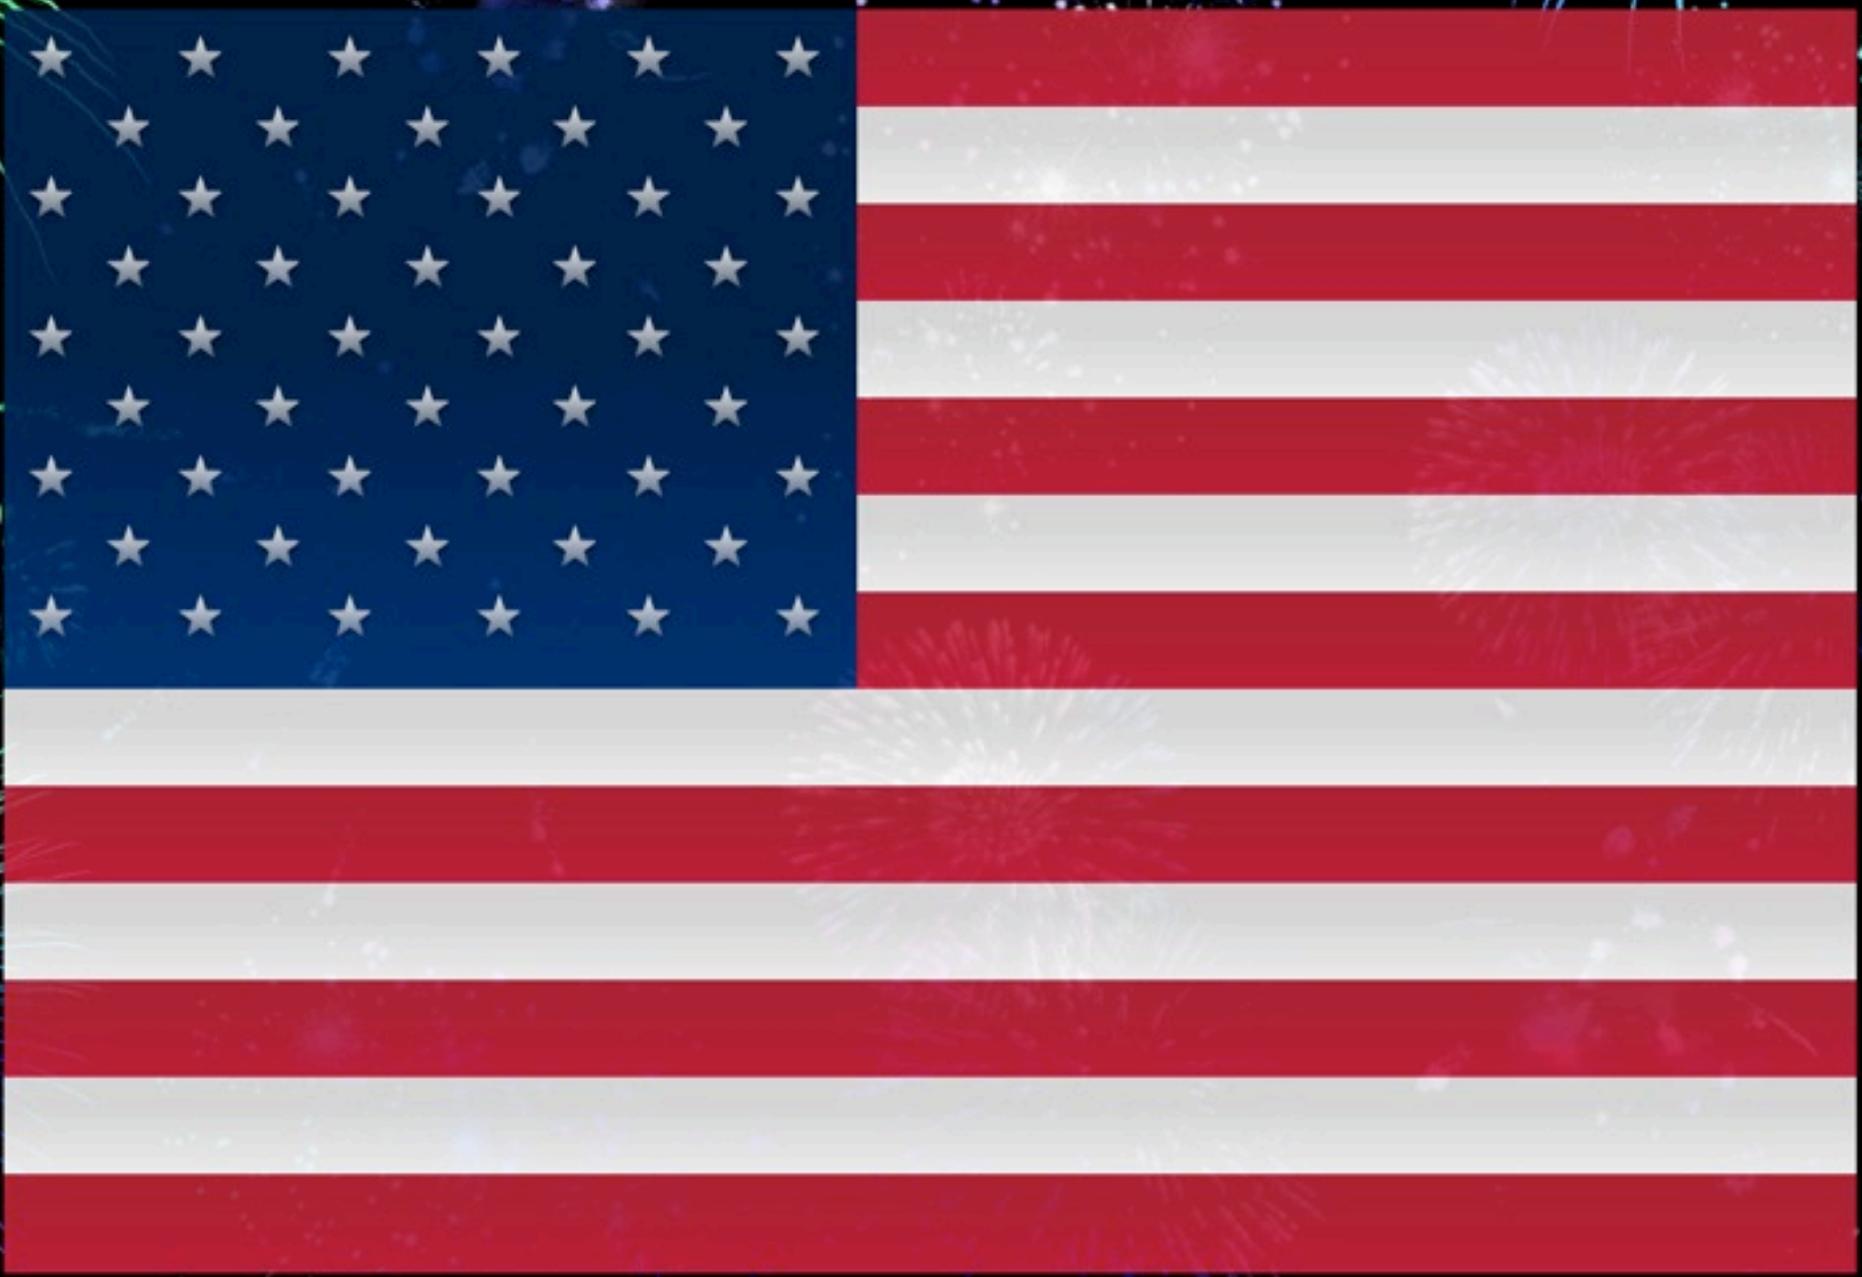

# Multiple Background Images

```
body {
 margin: 5%;
 padding: 0;
 font-size: 67.5%;
 background-image: url("fireworks.png"),
 url("bkgd.jpg");
 background-position: -40% -20%, center;
}
```

every now and then,  
testing what we know  
**decreases** our  
limitations and  
expands our skill set

<a href="#">CSS Values and Units</a>	<a href="#">Working Draft</a>	<a href="#">Working Draft</a>

# ~50 CSS3 Modules

<http://www.w3.org/Style/CSS/current-work#CSS3>

# WHERE IS CSS3 COMING?

- **The specification is divided into different chunks, modules**
  - **<http://www.w3.org/Style/CSS/current-work>**
    - **Transformations**
    - **Animations**
    - **Media Queries**
    - **and so on, and so on...**
    - **at a glacial pace ever towards yesterday**

# WHERE IS CSS3 COMING?

- **The specification is divided into different chunks, modules**
  - **<http://www.w3.org/Style/CSS/current-work>**
- **The specification is being written by W3C**
  - **<http://www.w3.org/Style/CSS/>**

# WHERE IS CSS3 COMING?

- **The specification is divided into different chunks, modules**
  - **<http://www.w3.org/Style/CSS/current-work>**
- **The specification is being written by W3C**
  - **<http://www.w3.org/Style/CSS/>** 
- **Browser vendors (like Firefox, Safari, and Opera) are implementing their own versions of these unfinished standards**
- **IE9 is “bringing the power of PC hardware and Windows”**

# **EXPLORING CSS3 (AND STUFF)**

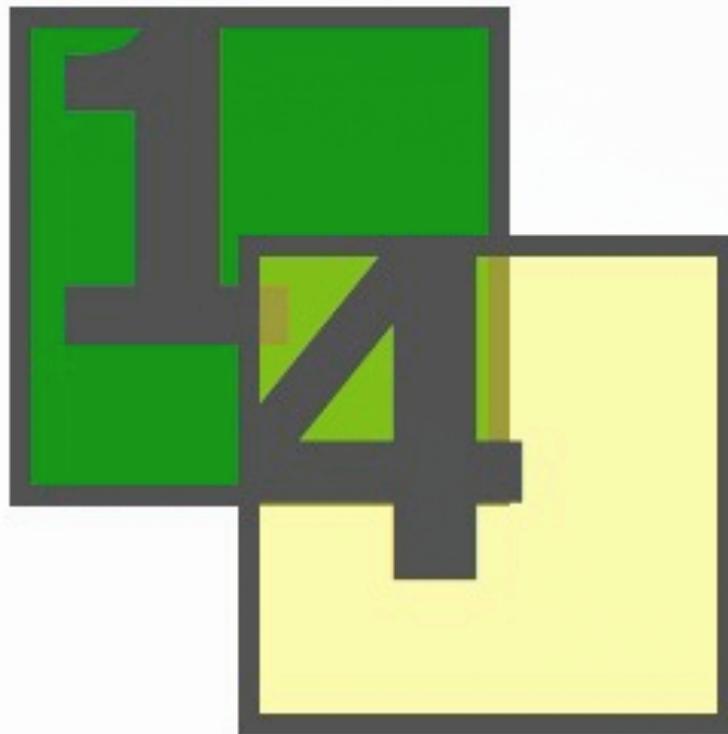

# COLOR

# **COLOR: OPACITY ON BACKGROUND COLORS (RGBA)**

# OPACITY

```
#number4 {
 background-color: rgba(255, 255, 0, .4);
}
```

# OPACITY

```
#number4 {
 background-color: rgb(255, 255, 0);
 background-color: rgba(255, 255, 0, .4);
}
```

# LESSONS LEARNED

- **Firefox 3+, Opera 10+, IE9+, and Safari support RGBA**
- **Requires another background-color property for cross-browser support.**
- **IE Support?**

# OPACITY IN IE

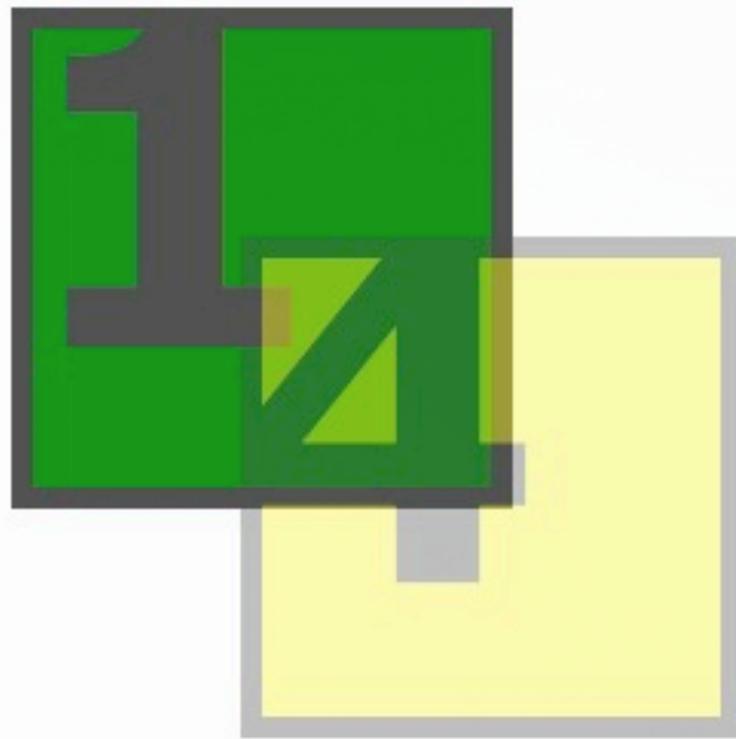

```
#number4 {
 background-color: transparent;
 filter:progid:DXImageTransform.Microsoft.gradient(
 startColorstr=#66FFFF00,
 endColorstr=#66FFFF00
);
}
```

# OPACITY IN IE

- **First step is to convert the RGB value of the color to hexadecimal. In this example, `rgb(255,255,0)` converts to `#FFFFFF00`.**
- **Next, convert the alpha transparency value to hexadecimal string . In this example, the value is `66`.**
  - **E.g., alpha value of `.3` equals `4D` in hexadecimal values**
- **Then assemble the hexadecimal value for transparency and the color together in one string, starting with the transparency: `#66FFFFFF00`.**

# OPACITY ON ELEMENTS

# OPACITY ON ELEMENTS

```
#number4 {
 opacity: .4; /* .4 = 40% transparency */
 filter: alpha(opacity=40); /* 40 = 40%
transparency */
}
```

# LESSONS LEARNED

- Supported in Firefox 1.5+, Opera 9+, Safari 1.2+ and Chrome.
- IE 5.5-8 requires the use of its own alpha filter in order for the effect to be cross-browser.
- A drawback to using the opacity filter is that the value is inherited:
  - If a parent element is set to be 10% transparent, the child elements' transparency is also going to be 10%.
  - Watch out for legibility issues within the Web page.

**TEXT**

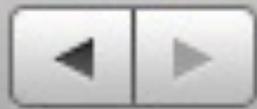

# TEXT-OVERFLOW

# PNEUMONOUltramicropicsilicovolcanoconiosis

The longest word in the Oxford English dictionary is used to name a lung disease caused by the inhalation of very fine silica dust, causing inflammation in the lungs.

The doctor says I have  
Pneumonoultramicro...  
and I should buy a  
dictionary.

The doctor says I ha...

# TEXT-OVERFLOW

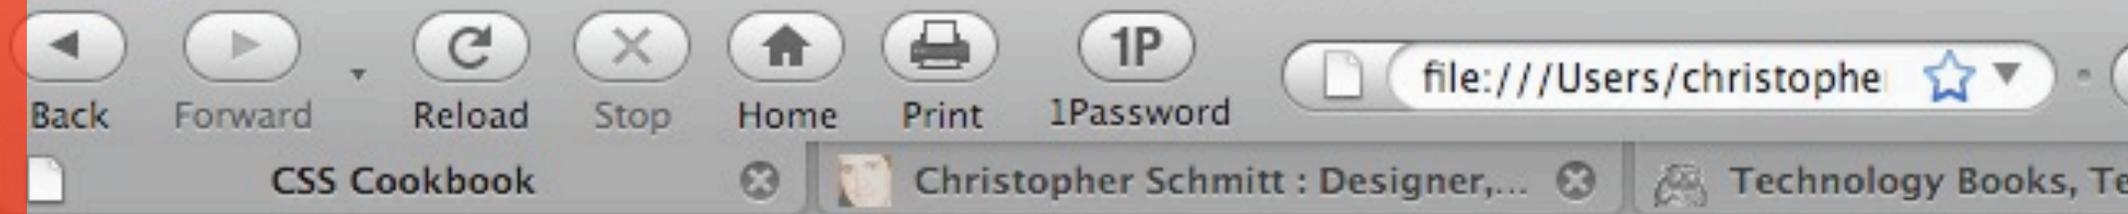

```
p {
 text-overflow: ellipsis;
 -o-text-overflow: ellipsis;
}
```

# LESSONS LEARNED

- Support:
  - Safari 3.2+
  - Opera 11+
  - Firefox 7+
  - and IE 6+

# TEXT-SELECTION

## E Pluribus Unum

Epsum factorial non deposit quid pro quo hic escorol. Olypian quarrels et gorilla congolium sic ad nauseum. Souvlaki ignitus carborundum e pluribus unum. Defacto lingo est igpay atinlay. selectus non provisio incongruous feline nolo contendere. Gratuitous octopus niacin, sodium glutimate. Quote meon an estimate et non interruptus stadium. Sic tempus fugit esperanto estrogen. Glorious baklava ex librus hup hey ad infinitum. Non sequitur condominium facer geranium incognito. Epsum factorial non deposit quid pro quo hic escorol. Marquee selectus provisio incongruous feline nolo contendere Olypian quarrels et gorilla congolium sic ad nauseum.

# TEXT-SELECTION PSEUDO-ELEMENT

```
::selection {
 color: #90c;
 background: #cf0;
}
```

```
::-moz-selection {
 color: #90c;
 background: #cf0;
}
```

# LESSONS LEARNED

- Support:
  - Safari 1.1+
  - Firefox 1.5+ (needs -moz-)
  - Opera 9.5+
  - IE9+
- Nice subtle effect, esp. if you deal with a lot of text on your site.

# TEXT COLUMNS

<http://paulirish.com/2009/bulletproof-font-face-implementation-syntax/>

# LESSONS LEARNED

- Getting @font-face to work is a little tough.
  - Use <http://fontquirrel.com> for pre-made kits, @font-face generator
- Chrome supports @font-face
- Don't feel like bothering with all that hassle?
  - Use font services like [typekit.com](http://typekit.com) for 100s of licensed fonts.
  - Use commercially free fonts (see <http://fontquirrel.com>)

# LESSONS LEARNED

- Font files are LARGE
  - gzip them, if you use them:  
<http://articles.sitepoint.com/article/web-site-optimization-steps/2>
- New font file format: WOFF:  
<http://hacks.mozilla.org/2009/10/woff/>
  - Font files are already compressed and supports meta information telling where the font came from. (Vendors happy.)
  - It's supported FF3.6+, IE9+, Chrome 5+, Safari 5.1+

# OH? YOU WANT “ITALICS”?

```
@font-face {
 font-family: 'MyFontFamilyItalic';
 src: url('myfont-webfont-italic.eot'); /* IE9 Compat Modes */
 src: url('myfont-webfont-italic.eot?iefix') format('eot'), /* IE6-IE8 */
 url('myfont-webfont-italic.woff') format('woff'), /* Modern Browsers */
 url('myfont-webfont-italic.ttf') format('truetype'), /* Safari, Android, iOS */
 url('myfont-webfont-italic.svg#svgFontName') format('svg'); /* Legacy iOS
*/
}
```

# TEXT-SHADOW

## A Good Sleepy is a Good Thing Indeed

I had to wake up early for the dentist appointment this morning. Why is it that on the day I have to wake up really early it is with a good sleep? I had the blankets right where they were the most comfortable, too.

If that ever happens, our society should allow you to tell the other person you were late because you realized you in the middle of a "good sleepy". It's the positive version of "I was in a car accident."

Try the phrase out, see how it works and report back to me.

# TEXT-SHADOW

```
h1 {
 font-size: 2.5em;

}
```

# LESSONS LEARNED

- Works in FF 3.1+ and Safari 4+, IE 10
- Image is scaled, if text is also scaled.
- **Other values besides “stretch” are “repeat” (tiles the image); “round”, which tiles and filled it with whole images; and “space”, which is like “round” except it leaves empty space**

# BORDER-RADIUS

# BORDER-RADIUS

```
div {
background-image: url(beach.jpg);
width: 375px;
height: 500px;
border: 8px solid #666;
border-radius: 40px;
-moz-border-radius: 40px;
-webkit-border-radius: 40px;
}
```

# BORDER-RADIUS

CSS3	Firefox	WebKit
border-radius	-moz-border-radius	-webkit-border-radius
border-top-left-radius	-moz-border-radius-topleft	-webkit-border-top-left-radius
border-top-right-radius	-moz-border-radius-topright	-webkit-border-top-right-radius
border-bottom-right-radius	-moz-border-radius-bottomright	-webkit-border-bottom-right-radius
border-bottom-left-radius	-moz-border-radius-bottomleft	-webkit-border-bottom-left-radius

# LESSONS LEARNED

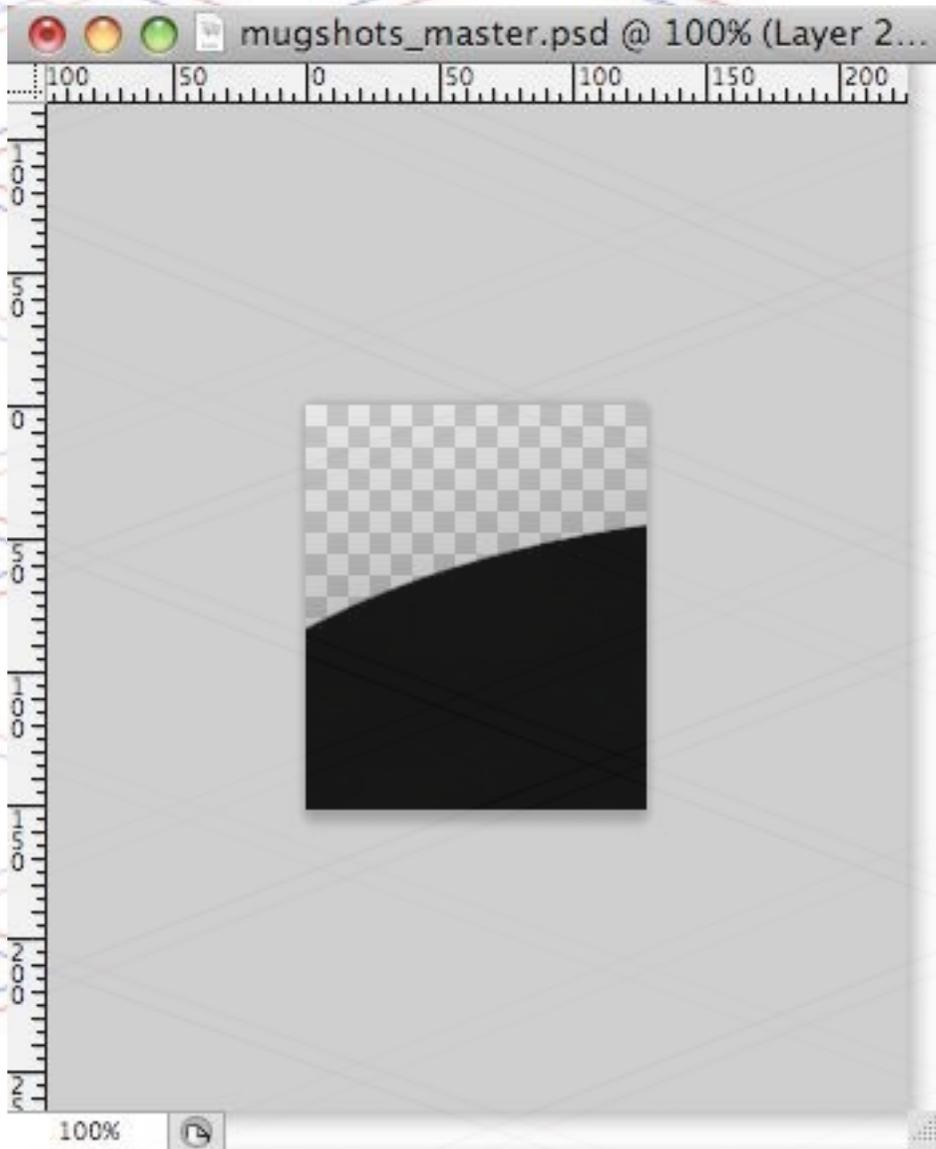

- Radius is half the distance of the diameter. (Stay in school, kids!)
- Radius border can be applied to one, two, three or all corners.
- The higher the value for the radius, the more rounded the corner will be.
- If borders on an inline image (IMG element) are rather large, borders are shown behind the image (see previous screenshot).
  - Workaround is to either keep border-radius value small or place image in background.

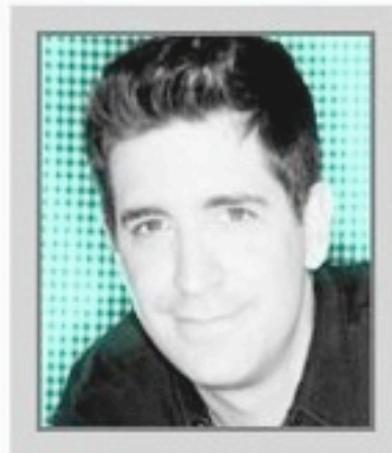

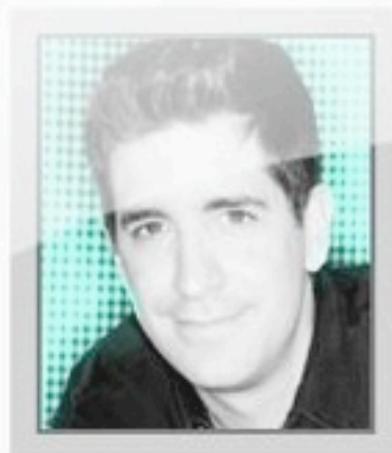

# EFFECTS

# IMAGE MASKS

# IMAGE MASKS

```
img {
 display: block;
 float: left;
 margin-right: 20px;
 border: 10px solid #ccc;
 padding: 2px;
 background-color: #666;
 -webkit-mask-box-image: url(mask.png);
}
```

# LESSONS LEARNED

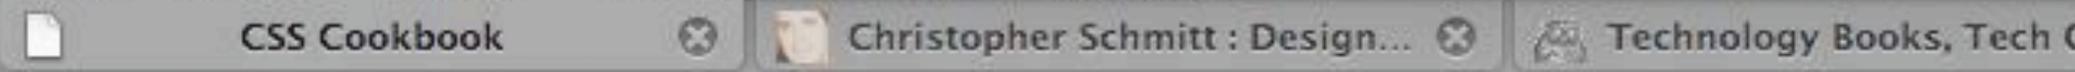

- When creating a mask, every part of the image that is transparent becomes the mask or the part that hides a portion of the background image.
  - Approach is somewhat hard to understand, since typically, alpha transparency is, well, transparent.
- The masks scale to the complete width of image, including borders.
- The background shows through, including background images.
  - Might work best with areas of flat color behind the images

# GRADIENTS

file:///Users/christ

# GRADIENTS

```
div.building {
border: 1px solid #666;
float: left;
width: 300px;
height: 300px;
margin: 20px;
```

```
background-image:
```

```
-webkit-gradient(radial,center center,900,center
bottom,0,from(#0cf),to(white));
```

```
background-image:
```

```
-moz-radial-gradient(center,900px,center
bottom,0,from(#0cf),to(white));
```

```
background-repeat: no-repeat;
```

```
}
```

# SAFARI GRADIENTS

**background-image:  
-webkit-gradient();**

Recommend using background-image over background shorthand.

# SAFARI GRADIENTS

**background-image:**  
**-webkit-gradient(radial);**

Other value it accepts is linear.

# SAFARI GRADIENTS

**background-image:**

**-webkit-gradient(radial,center center,900);**

Set the starting position of gradient.

# SAFARI GRADIENTS

**background-image:**

**-webkit-gradient(radial,center center,900,center  
bottom,0);**

Set the end position of gradient.

# SAFARI GRADIENTS

**background-image:**

**-webkit-gradient(radial,center center,900,center bottom,0,from(#0cf),to(white));**

Set the starting and stopping colors.

# LESSONS LEARNED

- Gradients in Safari can be applied to not just background images of block-level elements, but also:
  - list bullets, generated content, and border-images!
- Unit values aren't accepted (px, em, etc.) It's assumed to be pixels.
- Don't use background-position shorthand values.
- Use a background-image with a gradient for "older" browsers.

# FIREFOX GRADIENTS

- Whereas Safari sets the type of gradient within its own proprietary property, Firefox has properties for both types of gradients: `-moz-radial-gradient()` and `-moz-radiallinear()`.
- Unlike the Safari gradient, you can use background-position shorthand values *and* unit values when setting the starting and stopping points of gradients.
- Firefox's implementation of CSS gradients concerns transparency.

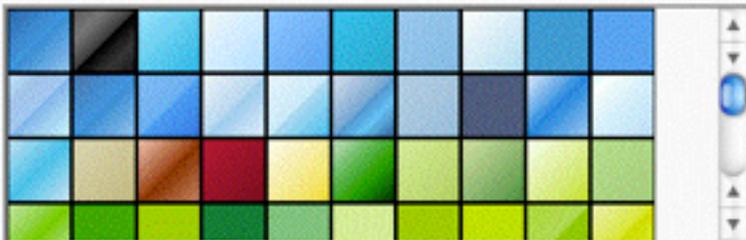

# FIREFOX GRADIENTS

```
background-image: -moz-linear-gradient(left top, left bottom,
from(rgba(153,51,0,.3)), to(#6b3703), color-stop(0.5, #903000));
```

# GRADIENT MASKS

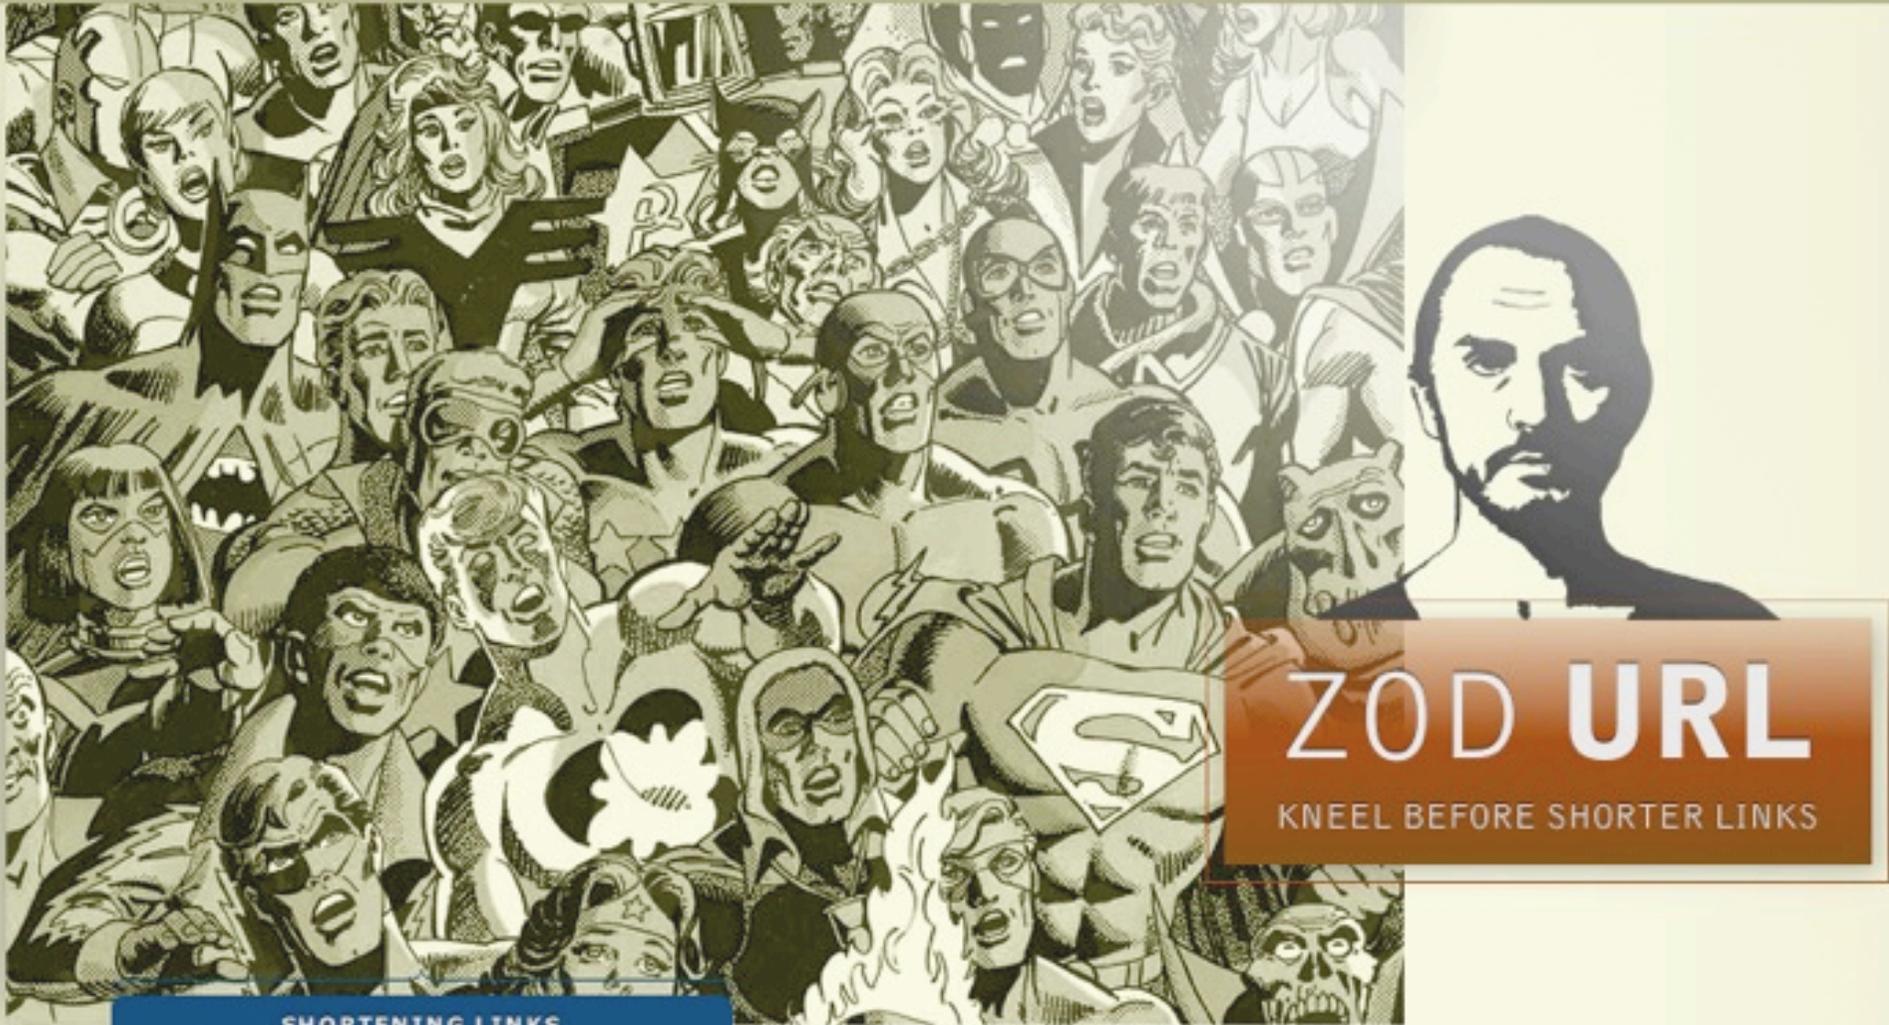

# GRADIENT MASKS

```
img {
display: block;
float: left;
margin-right: 20px;
border: 10px solid #ccc;
padding: 2px;
background-color: #666;
-webkit-mask-box-image:
 -webkit-gradient(linear, left bottom, left top,
 from(rgba(0,0,0,1)), to(rgba(0,0,0,0)));
}
```

Only works in Safari.

**SHORTENING LINKS**

URL shortening is a technique on the World Wide Web where ZodURL makes a web page available under a very short URL in addition to the original address. This technique makes it possible to avoid URL distortion when emailing, tweeting, or even reading them over quaint telephony.

Example of transparent gradients, border image, PNG8, text-shadow, box-shadow

# ANIMATING LINKS

```
#navsite a {
-webkit-transition-timing-function: linear;
-webkit-transition-duration: .66s;
-webkit-transition-property: background-color;
}
```

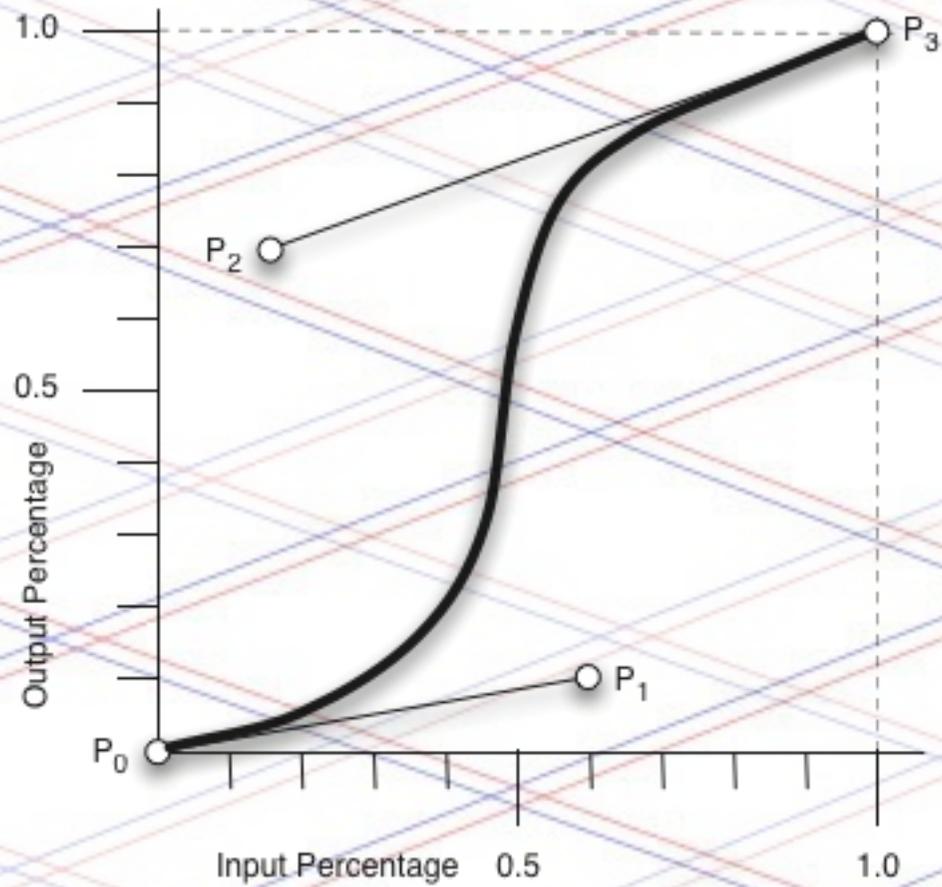

**Style rollover links normally.**

# LESSONS LEARNED

- **The transitioning-timing-function states the type of animation the effect is going to take.**
  - **In this example, the value is set to linear, which means each frame of the animation length takes the same amount of time.**
  - **Other values for transitioning-timing-function include ease, ease-in, ease-out, and cubic-bezier(x1, y1, x2, y2).**

# CHARACTERISTICS OF

<https://www3.oca.com/mon/#/main/mg-fund>

# CUBIC-BEZIER CURVE

**cubic-bezier(x1, y1, x2, y2)**

- **The first two values of cubic-bezier represent the transition on a curve, as shown in the figure.**
- **Values for y1 and y2 represent the start and end of the transition and are always equal to the values of 0.0 and 1.0, respectively.**
- **The speed with which the transition takes hold is represented by the values x1 and x2. The greater the value for x1 and x2, the slower the transition occurs.**

# CUBIC BEZIER CURVE

`cubic-bezier(x1, y1, x2, y2)`

- **A value of ease-in starts the transition at a slow speed and then speeds up. This value is equivalent to `cubic-bezier(0.42, 0, 1.0, 1)`.**
- **The ease-out value starts the transition at a fast speed and then slows down. This value is equivalent to `cubic-bezier(0.42, 0, 1.0, 1)`.**
- **The ease value is equivalent to `cubic-bezier(0.25, 0.1, 0.25, 1.0)`.**

# DURATION & DELAY

- **The *transition-duration* property's default value is 0.**
  - **Any negative value is treated as though it's zero.**
  - **Units the value may take include, but are not limited to, "s" for seconds and "ms" for milliseconds.**
- **The *transition-delay* property sets the amount of time before a transition starts.**

# TRANSITION PROPERTY

- **The *transition-property* property defines which CSS visual property the transition is applied to.**
- **In the animated link example, the transition is applied to the background color.**

# SHORTHAND PROPERTY

- **You can write the properties of the transition effect in one value for the transition property:**

```
#navsite a {
 -webkit-transition: background-color .66s linear;
}
```

# Ceaser

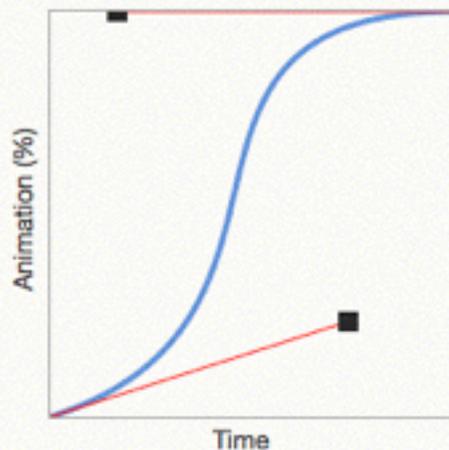

## CSS EASING ANIMATION TOOL

[Tweet](#)

1. Choose an easing type and test it out with a few effects.
2. If you don't quite like the easing, grab a handle and fix it.
3. When you're happy, snag your code and off you go.

Now that we can use CSS transitions in all the modern browsers, let's make them pretty. I love the classic Penner equations with Flash and jQuery, so I included most of those. If you're anything like me\*, you probably thought this about the default easing options: "ease-in, ease-out...yawn." The mysterious cubic-bezier has a lot of potential, but was cumbersome to use. Until now. Also, touch-device friendly!

\*If you are anything like me, we should be friends [@matthewlein](#)

Easing:

Duration:

Effect:

<http://matthewlein.com/ceaser/>

### Code snippets, short and long-hand:

```
-webkit-transition: all 1000ms cubic-bezier(0.735, 0.235, 0.165, 1.000);
-moz-transition: all 1000ms cubic-bezier(0.735, 0.235, 0.165, 1.000);
-o-transition: all 1000ms cubic-bezier(0.735, 0.235, 0.165, 1.000);
transition: all 1000ms cubic-bezier(0.735, 0.235, 0.165, 1.000); /* custom */
```

# COMPLEX ANIMATED LINKS

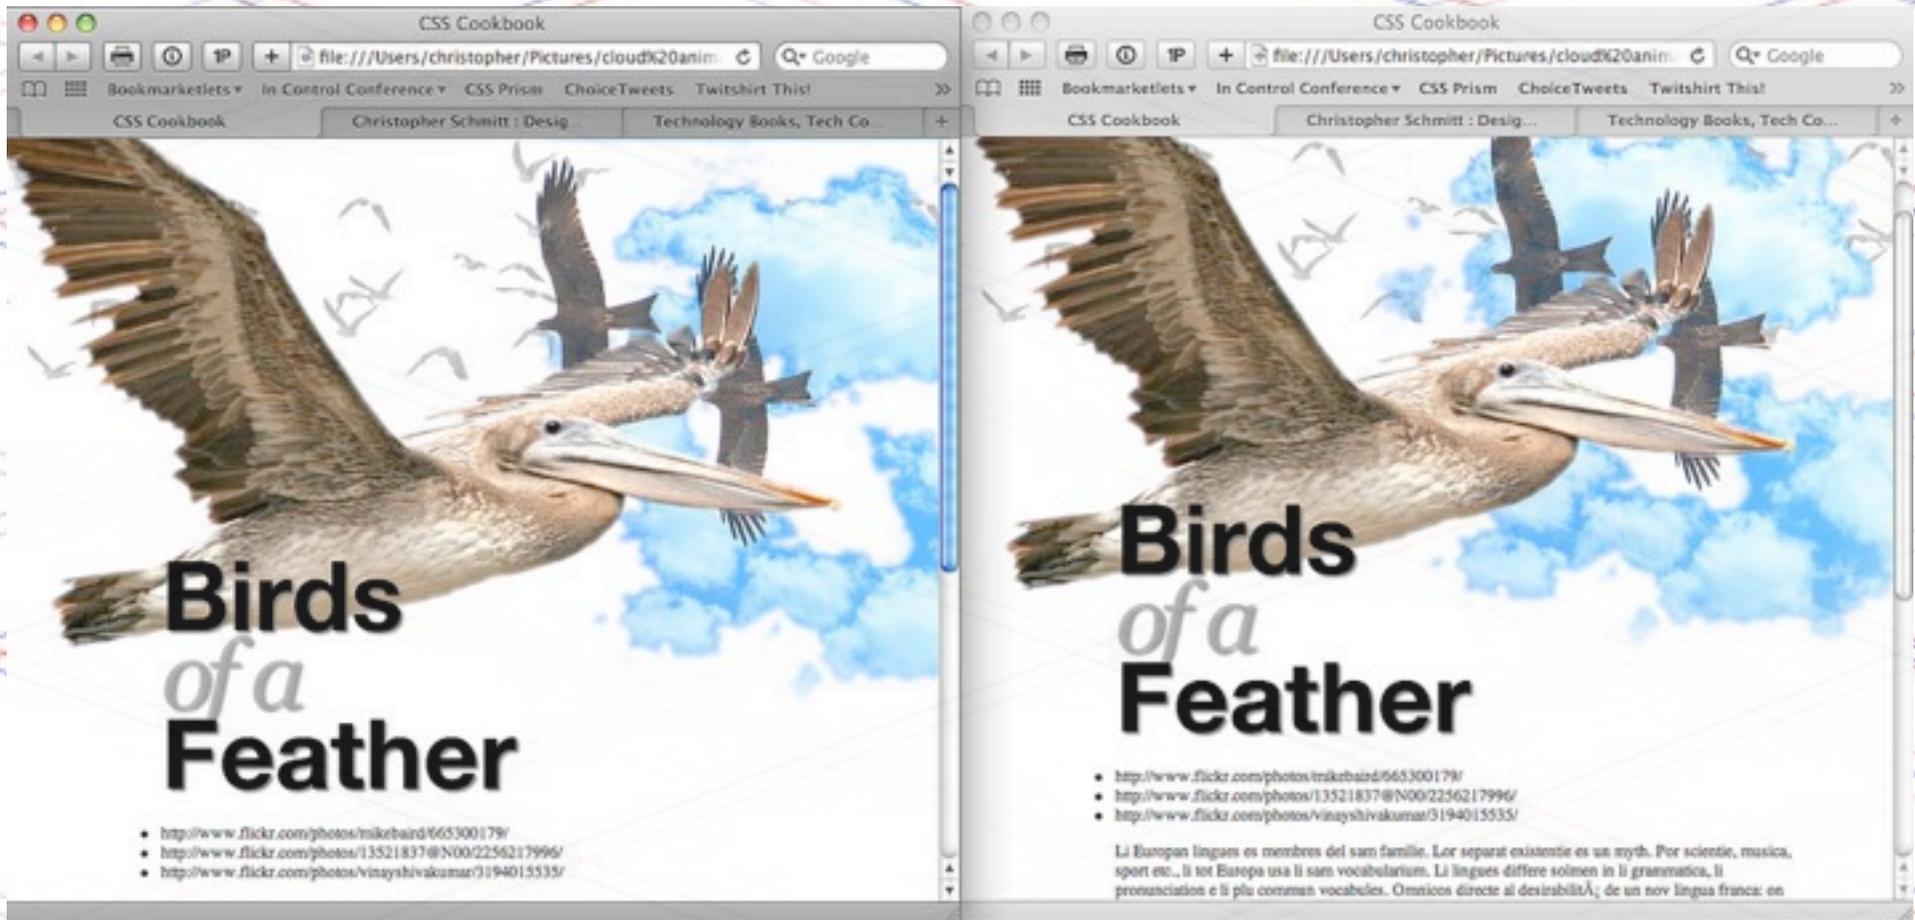

- Web designer Faruk Ateş's personal site (see <http://farukat.es/>) uses the *transition* property to change the color of the element.
- As well as the color, width, box shadow, text shadow, *and* opacity.

# COMPLEX ANIMATED LINKS

```
#web20 li a {
 text-shadow: rgba(0,0,0, 0) 1px 1px 2px;
 -moz-box-shadow: rgba(0,0,0, 0) 2px 2px 2px;
 -webkit-box-shadow: rgba(0,0,0, 0) 2px 2px 2px;
 -moz-border-radius-topright: 31px;
 -moz-border-radius-bottomright: 31px;
 -webkit-border-top-right-radius: 31px;
 -webkit-border-bottom-right-radius: 31px;
 -webkit-transition: background-color .25s ease,
 color .5s ease,
 width .2s ease-out,
 -webkit-box-shadow .25s ease,
 text-shadow .2s ease,
 opacity .2s ease;
}
```

# ANIMATING ELEMENTS

# ANIMATING ELEMENTS

```
<body>
<div id="clouds I"></div>
[...]
</body>
```

# ANIMATING ELEMENTS

```
#clouds1 {
width: 627px;
height: 410px;
position: absolute;
right: -300px;
top: 0;
background-image: url(clouds.png);
}
```

# ANIMATING ELEMENTS

```
@-webkit-keyframes "clouds" {
 from {
 right: 0px;
 }
 to {
 right: 100px;
 }
}
```

# ANIMATING ELEMENTS

```
#clouds1 {
width: 627px;
height: 410px;
position: absolute;
right: -300px;
top: 0;
background-image: url(clouds.png);
-webkit-transform: translate(300px, 0px);
-webkit-animation-name: "clouds";
-webkit-animation-duration: 10s;
-webkit-animation-iteration-count: 10;
-webkit-animation-direction: alternate;
}
```

# ANIMATING ELEMENTS

- **Animations can take on more than one property (think offset properties and even opacity for some interesting effects).**
- **The *animation-transform* property is used to associate which keyframe rule is used (“clouds”).**
- **The *animation-duration* is set for how long the effect should occur. (Negative values are treated as zero.)**
- **The *animation-iteration-count* tells how many times it should happen. For constant looping, use value of “infinite”.**
- **Use *animation-direction* property set to normal loops animation, while “alternate” creates a more seamless presentation (back and forth).**
